

Controlant on track to meet its 2030 science-based target

Controlant reduced **Scope 1+2** emissions in 2025 by 33%, suggesting continued alignment with the 2030 science-based target.

The further emission reduction reflects the leaner organization following corporate restructuring in 2H24 and 2025, including further consolidation and reduction in office space and lower usage of the US service center due to the move to a new facility in Q2, resulting in lower electricity usage.

We reduced **Scope 3** emissions in 2025 by 41%.

Our scope 3 emissions reduction is in line with the smaller organization, headcount reduction, and cost control measures driving down most scope 3 categories, particularly purchased goods & services (category 1), business travel (category 6) and employee commuting (category 7), resulting in lower emissions.
