

WORTHINGTON INDUSTRIES

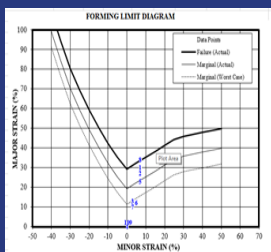

Learn how our Material Support & Solutions team solved this customer material issue:

COST REDUCTION

THE PROBLEM:

Maintaining part performance of parts manufactured with CRSH steel using lower cost alternatives while realizing joint cost savings for the customer and Worthington.

THE ANALYSIS:

Our Metallurgists were brought in to apply their material expertise to evaluate reducing part cost while maintaining part value through analytics, technical evaluation and experience.

THE SOLUTION:

The team identified multiple parts that were converted from CRSH substrate to HRPO substrate, resulting in a six-figure cost savings and no loss of part performance.

THE ACTION:

When you are tasked with lowering part costs by using alternative materials without compromising part performance, contact the Material Support & Solutions team at Worthington.
