

# Civil & Construction

## Partnering for Smarter, Safer & More Efficient Construction

At Master Builders Solutions®, we provide more than just advanced construction materials. Our expertise spans the entire civil infrastructure lifecycle, delivering tailored solutions that enhance safety, durability, and sustainability. With a strong focus on continuous innovation, our experts offer on-site support, technical guidance, and laboratory testing to maximise performance. Backed by both local and global R&D, we develop high-performance systems that drive long-term success in ANZ's civil and construction sector.

# 115+ Years of Industry Leading Innovation & Expertise

With a legacy dating back to 1909, Master Builders Solutions® brings unmatched expertise to ANZ's civil and construction industry. Backed by global R&D, our local team delivers tailored support and innovative solutions that improve the safety, durability, and efficiency of infrastructure projects.

## Our Technologies for the Civil & Construction Industry:

- **Corrosion Protection** – Systems that extend asset life by shielding structures from environmental exposure.
- **Injection Systems** – Targeted sealing and stabilisation for cracks, voids, and structural reinforcement.
- **Joint Systems** – Durable solutions that accommodate movement and prevent ingress.
- **Performance Flooring** – Hard-wearing flooring for high-traffic and industrial environments.
- **Performance Grouts** – High-strength grouts for structural, precision, and anchoring applications.
- **Concrete Repair Mortars** – Resin and cementitious systems for restoring and protecting concrete structures.
- **GRP Ground Anchors & Soil Nails** – Stabilisation solutions for slopes, retaining walls, and deep excavations.
- **Structural Strengthening** – Systems designed to reinforce, upgrade, and extend the life of existing structures.
- **Waterproofing** – Advanced technologies to prevent water ingress and reduce long-term maintenance.
- **Wind Turbine Grouting** – Precision grouts for stable, secure turbine foundation performance.
