

Master X-Seed STE 800

Strength-Enhancing Admixture for Concrete with High SCM Replacement

Master X-Seed STE 800 boosts strength development of concrete at all ages, enabling cementitious reduction and increased utilisation of SCMs.

Product Benefits:

- Increased strength development at both early (1-3 day) and late (7-28) ages
- Enables increased use of SCMs, particularly GGBFS
- Enables reduction in embodied CO₂
- Improved cement hydration
- Total cementitious content reduction
- Increased strength safety factor

Strength Redefined

Improved Strength At All Ages With High SCM Replacement

The chart below shows the strength enhancement that can be achieved in a concrete mixture containing Master X-Seed STE 800 compared to a reference untreated mix.

Higher compressive strength gains can be seen with lower SCM replacement percentages when using Master X-Seed STE 800. The performance of Master X-Seed STE 800 with any cementitious system should be confirmed through laboratory trials.
