

MasterSure HES 1510

Second generation high range water reducing/superplasticizing admixture for concrete with good consistence retention and low W/C ratio for precast concrete industry, for winter.

Material description

MasterSure HES 1510 (High Early Strength) is an innovative second generation superplasticizer of polycarboxylic ether (PCE) polymers with good water reduction and extended consistency retention dedicated to precast concrete where high early strengths are needed in order to speed up the precast operation of demoulding and moving of the elements to the stocking area.

The fresh concrete shows no segregation and at the same time has a low water cement ratio and, consequently, high early and long term strengths as per EN 206 and UNI 11104 standards. MasterSure HES 1510 is chloride free, meets UNI EN 934-2 and it is compatible with all cements meeting the EN 197-1 standards. Advised for winter applications.

The new chemistry of MasterSure HES

MasterSure HES 1510 is an innovative line of superplasticizer based on a unique blend of state of the art polymers of Master Builders Solutions research laboratory.

The polymer system present in MasterSure HES are studied in order to be slowly release in the basic conditions of the cement paste at the very early hydration process and to be gradually adsorbed onto adsorption onto the cement particles partially hydrated and disperses them efficiently over a long period of time. MasterSure HES molecules leave sufficient surface of the cement exposed to allow contact with water for a rapid hydration reaction which results in high early strength development.

Benefits for Precast producer

MasterSure HES 1510 offers the following benefit for the precast concrete industry to:

- produce Rheoplastic or Smart Dynamic Concrete having a low water cement ratio;
- extended the consistence retention of concrete the time required for the pouring of the precasted elements;

- obtain high early strength development also at the very early curing ages;
- produce durable precast concrete elements as per EN 206. As compared to the traditional superplasticizers, the engineering properties such as early and ultimate compressive and flexural strengths, bond to steel, and modulus of elasticity, shrinkage, creep, and impermeability are improved.

In compliance with the European Regulation (EU No 305/2011 and EU No. 574/2014) the product is provided with the CE marking according to UNI EN 934-2 and the relative DoP (Declaration of Performance).

Dosage

The recommended dosage rate range is 0.8 to 1.2 litres per 100 kg of binder. Other dosages may be recommended in special cases according to specific job site conditions. In such cases please consult our Technical Service Department for advice.

Packaging and storage

MasterSure HES 1510 is available in 10 litre cans, 1.000 litre container or in bulk.

MasterSure HES 1510 must be stored in a place where the temperature does not drop below 5°C.

MasterSure HES 1510

Second generation high range water reducing/superplasticizing admixture for concrete with good consistence retention and low W/C ratio for precast concrete industry, for winter.

Technical Information	
Form	Liquid
Relative density (g/cc at 20°C)	1.045 – 1.075
Essential characteristic in accordance to EN 934-2	Performance
Chloride ion content	≤ 0.1% by mass
Alkali content (Na ₂ O equivalent)	≤ 3.0%
Corrosion behaviour	Contains component from EN 934-1: 2008 Annex A.2
Hardening time/strength development	Equal consistence: 24h ≥ 140% 28 days ≥ 115% Equal w/c ratio: 28 days ≥ 90%
Air content	Equal consistence: ≤ 2.0 % Equal w/c ratio: ≤ 2.0 %
Water reduction	≥ 12%
Consistency	Increase: ≥ 120 mm Retention: comply 3.2

Directions for use

MasterSure HES 1510 is a liquid admixture to be added to the concrete during the mixing process:

- mix cement and secondary binders, sand, coarse aggregates and the mix water until a stiff, yet homogeneous, mixture is obtained;
- optimal mixing water reduction is obtained if MasterSure HES 1510 is mixed into the concrete right after the addition of the initial 80-90% of the total water;
- avoid adding the admixture to the dry aggregates;
- add MasterSure HES 1510 admixture and mix again for to 60 seconds in order to disperse it homogeneously;
- continue mixing until required workability is obtained, with addition of the remaining water.

Compatibility

In order to optimise some special properties of the concrete, use of the following complementary admixtures is suggested:

- MasterMatrix SDC 150 to produce a Smart Dynamic Concrete;
- silica fume, MasterLife MS 610, for high performance concrete and increased durability in chemical aggressive environments (exposure class XA1 to XA3, EN 206);
- demoulding agent for MasterFinish line for to help remove formwork and to improve the architectural finish.

MasterSure HES 1510 is not compatible with all admixtures of MasterRheobuild series.

Safety information

For information on the correct and safe use, transport, storage and disposal of the product, consult the most recent Safety Data Sheet.
