specialist distributor.

MasterKure 111

Quality Concrete Finishing In Hot Weather

Pouring and finishing concrete in hot, dry conditions can be a real challenge! Get it wrong, and you can end up with shrinkage cracking and a sub-standard slab.

The answer is MasterKure 111.

Master Builders Solutions' MasterKure 111 is not a curing agent, it is an evaporation retardant and finishing aid that has been specifically developed to assist in producing high quality concrete flatwork in rapid-drying conditions such as high temperatures, low humidity and high winds. It retards water evaporation during trowelling, regulates the surface condition of the slab and permits better adherence to finishing schedules.

MasterKure 111 is especially effective in combating drying shrinkage cracking in hot weather concrete.

Easy To Use

Importantly, MasterKure 111 is also extremely easy to use:

STEP 1

Mix 1 litre of product with 9 litres of water

STEP 2

Fill handheld or backpack style pressure pump and pressurise

STEP 3

Apply a fine mist immediately after screeding. One application if under 30°C, a second application after 30 minutes if it's 30-35°C.
