Watertight Concrete Structures

MasterLife® 300 Series Crystalline Capillary Waterproofing Admixtures

Watertight Concrete Structures

Developing a watertight concrete structure is a combination of appropriate design detail, proper construction practices, and high-performance products working together to minimize and eliminate water migration through concrete.

Master Builders Solutions has a portfolio of technologies to help concrete producers, contractors, specifiers, and owners achieve watertight concrete structures. Our complete, reliable and long-lasting system approach includes integral waterproofing admixtures, waterproof coatings, waterproof repair materials, joint sealants, and water stops. In addition, the versatility of our innovative, fast-curing hand and spray-applied waterproofing technologies address the refurbishment and protection needs of a variety of structures.

Crystalline Capillary Integral Waterproofing Admixture – seals hairline cracks and reduces concrete permeability while allowing the concrete to breathe.

Joint Sealants – create a tenacious bond to a variety of substrates to ensure protection and weatherproofing during even the most aggressive conditions.

Deck Membrane and overlay solutions – offer long-lasting protection from harsh environments, weatherproofing and beautifying structures, liquid-applied.

Partnering for Success

Master Builders Solutions expertise in advanced concrete mixture optimization and concrete repair materials, coatings and sealants is like having a partner in the field to help you solve your biggest concrete waterproofing challenges.

Master Builders Solutions Waterproofing Package

MasterLife 300 Series – MasterLife 300 Series admixtures are integral crystalline capillary waterproofing admixtures for concrete. They are designed for use in above- and below-grade applications.

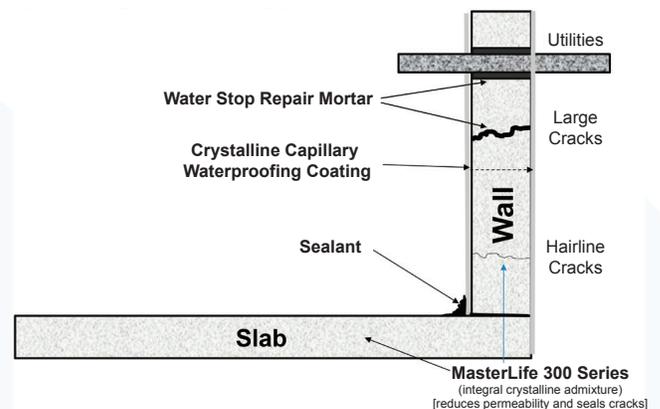

Crystalline Capillary Waterproofing Coating

– a portland cement-based coating for concrete and masonry that resists both positive and negative hydrostatic pressure.

Water Stop Repair Mortar – quick-setting, portland-cement-based hydraulic repair mortar that instantly stops running water through holes or cracks in concrete or masonry.

Sealant – a one-component, high-performance, non-priming, gun-grade, elastomeric polyurethane sealant. It requires no mixing and typically requires no priming to bond to many materials, including concrete and masonry.
