

How MasterEase[®] Admixture Technology Transforms Concrete Handling

Tough-to-handle concrete mixtures can increase labor, extend timelines, and require costly on-site adjustments. MasterEase provides an easy, effective solution to these handling challenges.

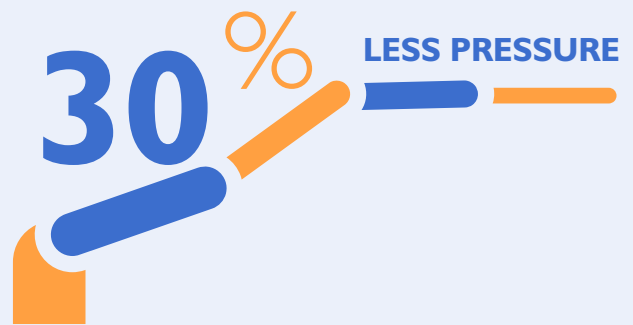

Enhanced Concrete Rheology

Reduces the stickiness and harshness, making concrete easier to work and build with.

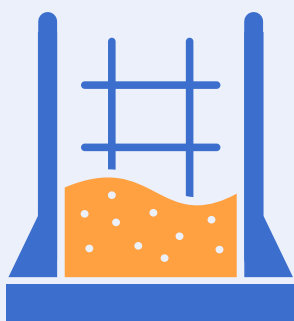

Pumping Concrete Just Got Easier

Lowers pumping pressure by up to 30%—helping increase output rate, equipment strain, and minimize line blockages.

Place and Consolidate with Greater Precision

Concrete flows smoothly through rebar and into forms **with less vibration**. Flatwork is placed faster with significantly easier raking and screeding.

No-Hassle Concrete Finishing

Fewer bull float passes to seal the surface. Faster finishing. Smoother, higher-quality surfaces with less effort.

Adding More Sustainability into the Mix

Enables the increased use of blended cements, silica fume, slag, M-sand, and crushed aggregates—maintaining **optimal workability while improving sustainability**.
