

HTML TEXT TAGS

cheatsheet

INTRO

This cheatsheet is here to help you feel comfortable with HTML tags for text without feeling like you have to memorize everything.

So, dive into this guide, and don't be afraid to refer to it as many times as you need—it's a tool to get you coding faster and stress-free!

TEXT TAGS

Most HTML tags have a beginning (`<p>`) and end (`</p>`) tag. Some tags close themselves (`
`).

`<p>...</p>`

Use for paragraphs!

```
1 <p>Apple pie lollipop pudding icing candy jelly cake. Lemon drops
2 cheesecake chocolate bar marzipan oat cake chocolate bar. Lollipop
3 jelly toffee sweet chocolate bar. Ice cream lemon drops cheesecake
4 donut bonbon sweet.</p>
```

`<h1>...</h1>`

Most important headline. Great for logos, page titles, etc.

`<h2>...</h2>`

Second most important headline. Use for article headlines or headlines for major sections of the page.

`<h3>...</h3>`

Third most important headline. Use for less important articles or other secondary content.

`<h4>...</h4>`

Fourth most important headline. Good for sidebars and footers.

`<h5>...</h5>`

Fifth most important headline.

`<h6>...</h6>`

Sixth most important headline.

`...`

Use to make sections of your text bold.

`...`

Use these to make portions of your text italic.

`
` **SELF-CLOSING**

Use the line break tag to add a line break between parts of your text.
