

Charter Select

A DATA-DRIVEN APPROACH TO MAKE MORE INFORMED DECISIONS WHEN FIXING VESSELS FOR CHARTER

Traditionally, vessel choices for chartering have been based on limited, siloed vessel data and basic fuel consumption predictions. With the rise of digitalization, increasing pressure to decarbonize, and the industry's transformation, this approach is evolving. ZeroNorth's Charter Select service, now enhanced with the Rapid Intel feature, is revolutionizing the industry's ability to evaluate a vessel's performance in the pre-fixture phase.

With Rapid Intel, charterers can quickly access comprehensive vessel information using just a vessel name. This feature provides insights into fuel curves, CII ratings, vessel performance, and more, all with minimal data input. Combined with Charter Select, charterers are empowered to make better-informed decisions driven by extensive historical performance data, advanced fuel modeling, and data analytics capabilities.

KEY FEATURES

- ✓ Easy comparison of any vessel pre-charter
- ✓ Accurate fuel consumption predictions for all vessels
- ✓ Estimate any operating condition and voyage
- ✓ CII rating prediction for vessels under consideration
- ✓ Comprehensive vessel information library
- ✓ ROI tracking of selected vessels against benchmark
- ✓ Rapid Intel: Quick insights with just a vessel name

Powered by an industry-leading data ecosystem with both proprietary and partner insights, ZeroNorth's fuel models can predict fuel consumption for any vessel globally. This helps charterers identify the most fuel-efficient and sustainable vessels to fix. With Rapid Intel, charterers can now swiftly access information on vessel characteristics, performance data, and accurate fuel consumption predictions in realistic operating conditions, all on one platform. This leads to high-quality and transparent information that informs better and more sustainable decisions.

BENEFITS FOR CHARTERERS AND OPERATORS

ABOUT ZERONORTH

Climate change poses a serious threat to the planet's future, but ZeroNorth is dedicated to making a difference. Our platform and software suite aim to make global trade green by enabling companies across the entire marine value chain to profitably decarbonize. The ZeroNorth platform is a leading multi-service hub which harnesses the power of data to create insights that enable voyage, vessel, and bunker optimization and inform better decision-making for stakeholders across global trade. By blending cutting-edge data-driven technology with human expertise, the ZeroNorth platform provides solutions that are helping the global shipping industry achieve optimal commercial performance and reduce its carbon emissions.
