

ZeroNorth Onboard

Improving collaboration between vessel and shore

ZeroNorth leads the green transition of the shipping industry, together with partners and customers, using technology and turning data into actions to support immediate emission reductions while maximising business value.

En route voyage optimisation for individual vessels

ZeroNorth Onboard empowers Masters by providing the opportunity to create and optimise voyage plans en route. By improving the collaboration between vessel and shore, the ZeroNorth platform ensures data visibility for vessel and voyage, enabling better communication based on a single source of truth.

With access to an updated weather forecast every six hours, plus ongoing access to fuel models, Masters will receive in-app notifications with recommendations for speed and route adjustments on the go.

Tailored to the needs of the individual vessel, ZeroNorth Onboard gives Masters the ability to instantly update and optimise their route without onshore support, improving efficiency for profit and planet.

Benefits

- Full autonomy with no need for ashore support
- Optimal route based on clear route comparisons
- Access to sophisticated fuel models

Features

- Secure login
- Integrated real-time weather route optimisation
- Shared view between Crew and Onshore teams
