

## FLORIDA MAN STEVE SCHALE SAYS

Black and Hispanic shares of the electorate are higher at this point in the cycle than they were four years ago - meaning more are voting earlier. That being said, both Black and Hispanic turnouts are lagging behind white turnout. For example, turnout among white Democrats is 58%, Black Democrats 44%, and Hispanic Democrats 42%.

To show just how important the higher-than-average-at-this-point turnout among Black Democrats is to the math: Whites make up 65% of all voters so far, and Republicans have a 542K advantage among these voters. Black voters make up 12.4% of all voters so far, but the Democratic advantage is 676K. [Read more here.](#)

## ELECTION PROGRESS

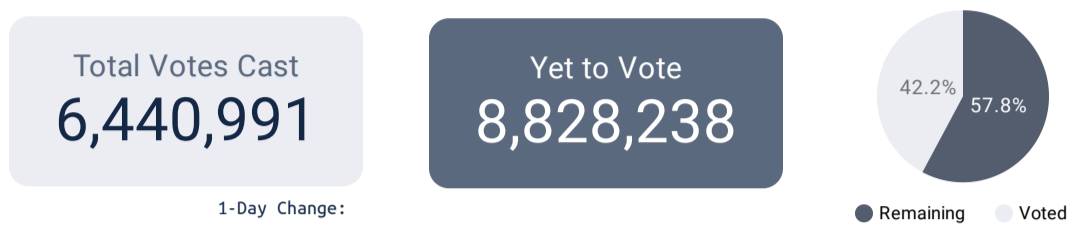

This section tracks the ongoing vote count as a share of the total potential vote. We break down votes cast by party affiliation and by the percentage of the overall vote they represent.

How many people have voted in Florida?

How many registered voters have yet to vote?

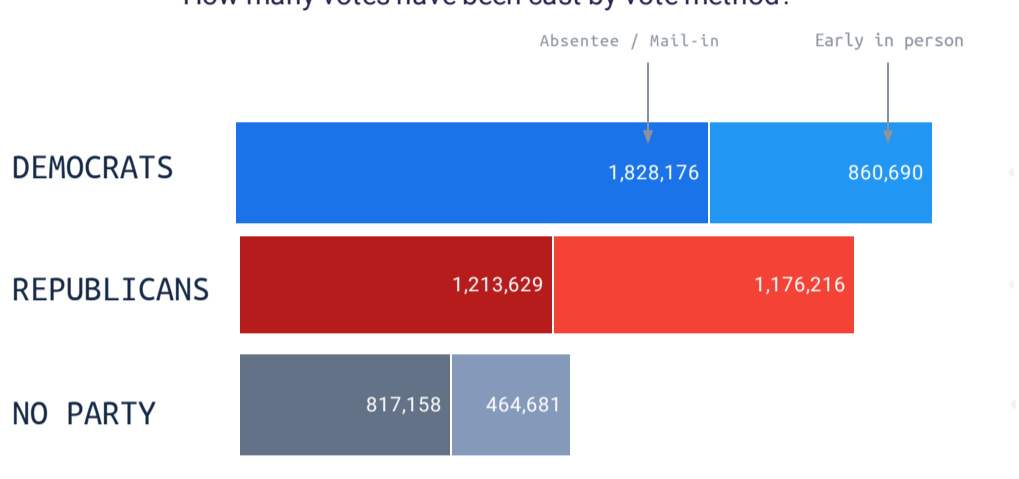

\*Hawkfish estimate of registered voters

How many votes have been cast by party affiliation?

How many votes have been cast by vote method?

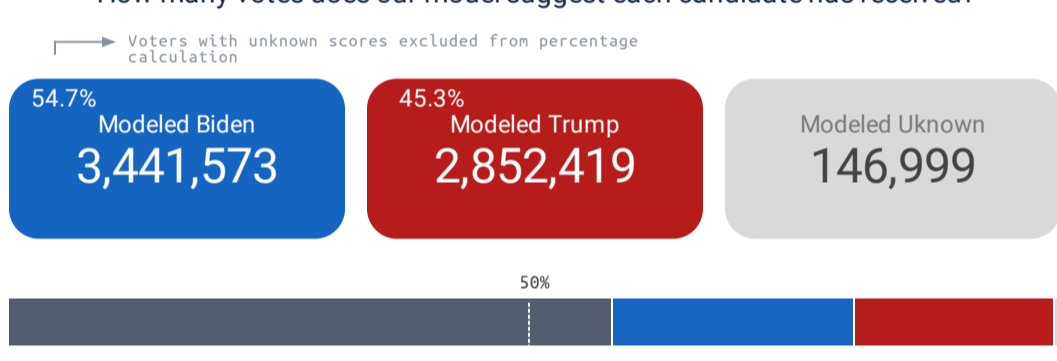

## MODELED CANDIDATE SUPPORT AMONG VOTES CAST TO-DATE

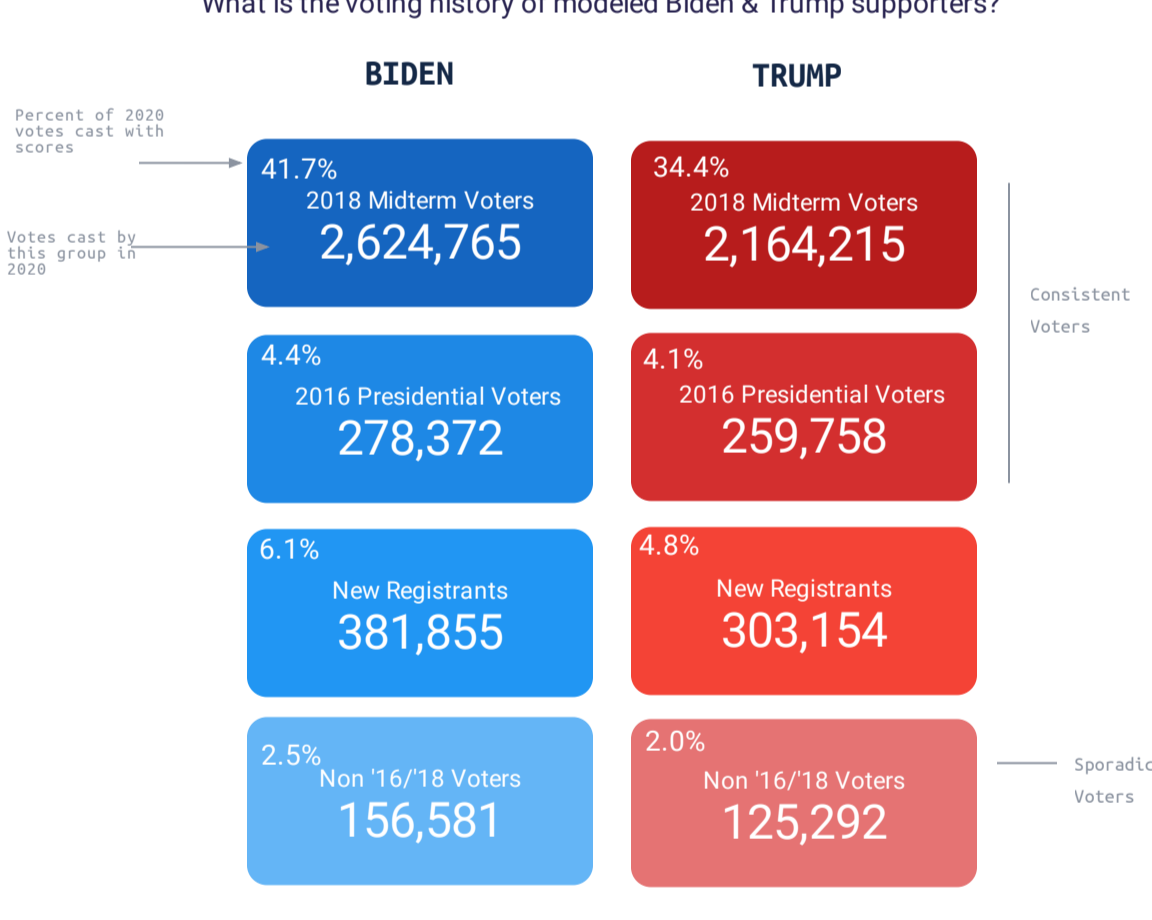

By analyzing data from the Florida Secretary of State alongside candidate support scores, we can predictively model how many votes Biden and Trump have likely received. We categorize supporters of each candidate by voting history.

How many votes does our model suggest each candidate has received?

What is the voting history of modeled Biden & Trump supporters?

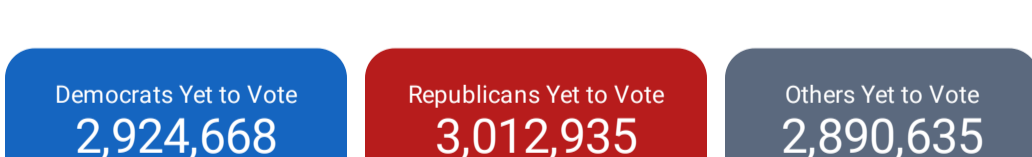

2018 Midterm voter = last voted in 2018  
Presidential voter = last voted in 2016  
New registrant = registered to vote after 2016 general election

## POTENTIAL VOTES NOT YET CAST

The final outcome will depend largely on voters who show up in person. We track the number of voters from each party who have yet to vote as well as those who have not requested a mail-in ballot. We do not expect all of them to vote; Florida's 2016 turnout rate was 75%.
