

Wiro Binding

How to correctly prepare artwork for print

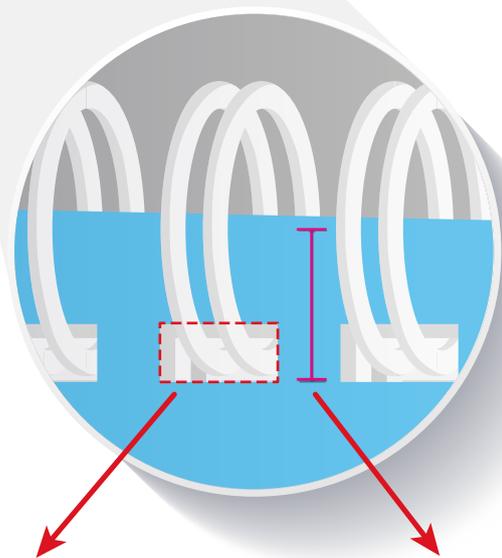

Leave space for binding

When creating artwork for wiro binding, leave at least **10mm of clear space** along the binding edge of each page.

This means all text and graphics should be positioned at least 10mm in from the edge to prevent any content being trimmed off during finishing.

Note: A 5mm wire hole is punched into each page. See templates for positioning information.

5mm punched hole
