"Struggling to turn website visitors into pipeline? This Play will help you automate lead generation with Leadfeeder, Clay, and AI, so you can identify, enrich, and engage decision-makers at scale."

**Ericson Dalusong**  
GTM @ Lead Assassin

## Recommended for

- ✓ B2B sales teams
- ✓ ABM, demand gen & growth marketers
- ✓ RevOps professionals optimizing GTM workflows

## Expected results

- ✓ Fully automated lead gen workflow for scalable ABM & demand gen
- ✓ 30% increase in lead-to-meeting conversion rates
- ✓ More pipeline from high-intent website visitors

# Introduction

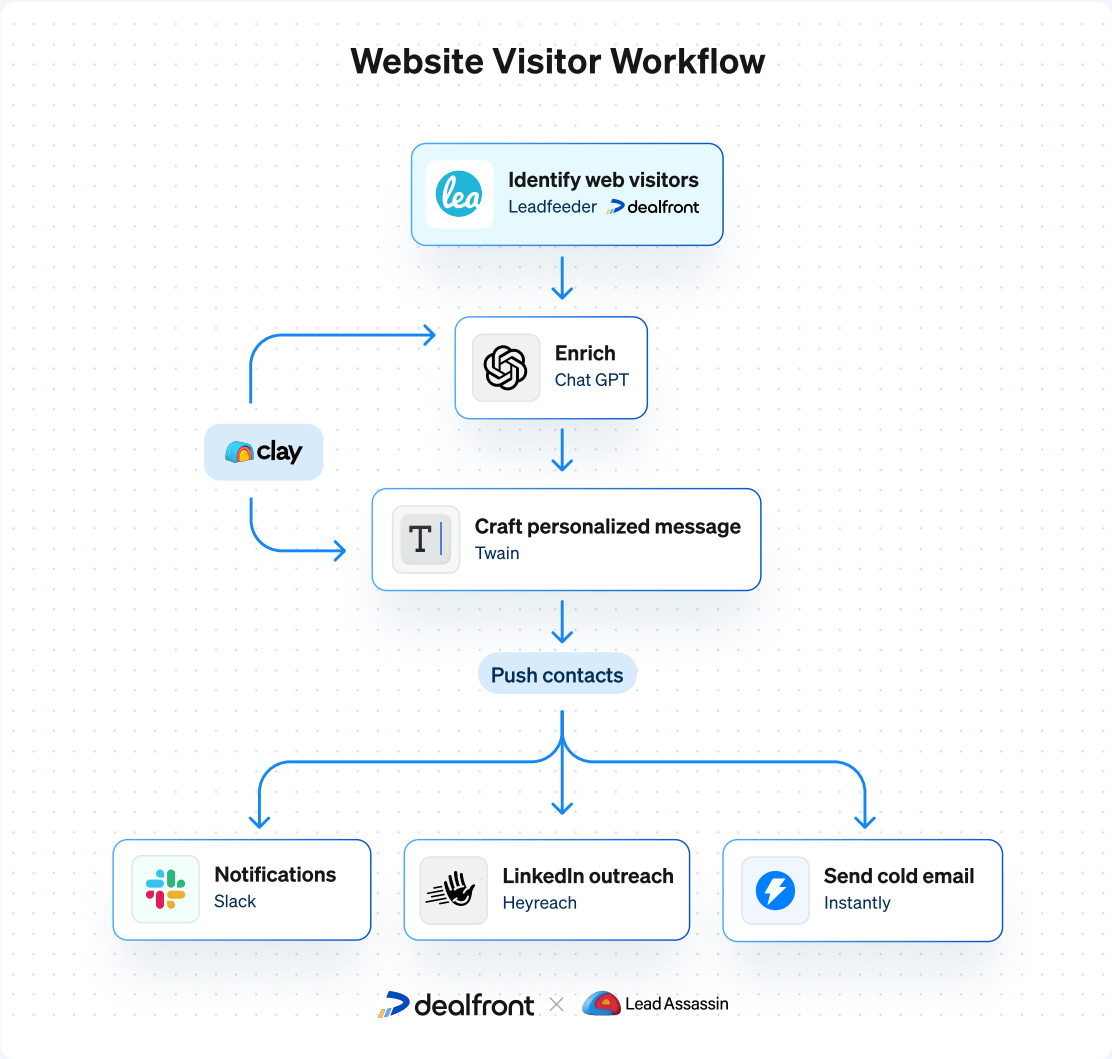

Every day, potential customers visit your website, browse your content, and then vanish. No form fills, no demo requests, no sign-ups. Sales teams know there’s demand, but they struggle to capture it.

So, where exactly is the problem? Largely, the challenge marketers face is that most website traffic remains anonymous. Even with high-quality content and compelling CTAs, the vast majority of visitors leave without taking action. Traditional lead capture methods rely too heavily on forms and outdated intent signals, leading to missed opportunities and wasted marketing spend.

Many teams try to solve this by investing in paid ads, more content, or manual outreach, but without the right data, they’re fishing in the dark. This results in bloated pipelines filled with unqualified leads, inefficiencies in prospecting, and reps spending too much time chasing the wrong accounts.

That’s why we created this Ccommunity Pplay, in partnership with Lead Assassin, to help revenue teams automate lead generation and pipeline growth. With the right tools, you can turn anonymous website visitors into actionable leads and automate personalized outreach at scale. In this Play, we’ll show you how to combine Leadfeeder and Clay to transform your inbound traffic into a predictable pipeline. You’ll learn how to:

- Identify high-intent website visitors—even if they don’t fill out a form
- Enrich visitor data with verified contacts and company insights
- Automate personalized outreach to engage prospects at the right time

# Step-by-Step Workflow Breakdown

## Step 1: Identify & segment website visitors with Leadfeeder

The first step in automating lead generation is to track and identify who’s visiting your website. This is where Leadfeeder comes in. Use the following points to get started:

### Install the Leadfeeder tracking pixel

Start by adding the Leadfeeder tracking pixel to your website. This enables real-time visitor tracking, allowing you to see which companies are engaging with your content, even if they don’t fill out a form.

### Get started by installing the Leadfeeder tracker on your website

The tracker is essential for Leadfeeder to identify the companies visiting your website. It is GDPR compliant and the setup takes only 2 minutes.

**Your website:** test.artursmirnov.com [Edit](#)

#### Recommended installation methods

For your website, these would work best

 **Google Tag Manager** [Start](#)

 **HTML code** [Start](#)

#### Other installation methods

If you want to install Leadfeeder in a different way

 Send via email

 Wix

 Squarespace

 GoDaddy

 WordPress

 Weebly

① Visit our [help center](#) or [contact our support team](#) for additional help with installing the tracker. The Leadfeeder tracker also works with Consent Management Platforms (CMPs). [Learn more](#) about easily setting up the tracker with a CMP. To learn more about Leadfeeder, [click here](#).

[Additional tracker configuration](#)

### View company-level engagement data

Once the pixel is installed and running, Leadfeeder will begin identifying the companies visiting your site. You’ll gain insights into:

- Which companies are visiting (based on their IP address)
- What pages they’re viewing (to gauge their level of interest)
- How often they return (a sign of strong buying intent)

This data is invaluable for identifying warm leads before they ever reach out.

## Create custom intent-based lists

To make the most of this data, you'll need to organize and segment visitors into meaningful lists. Leadfeeder allows you to set up filters based on:

- Engagement level (e.g., companies that visited multiple high-intent pages)
- Industry or company size (to focus on your ideal customer profile)
- Returning vs. new visitors (to track ongoing interest)

By creating intent-based lists, you can prioritize your outreach to companies showing real buying signals rather than chasing cold prospects.

## Step 2: Enrich company and contact data using Clay + AI

Once you've identified high-intent website visitors using Leadfeeder, the next step is to enrich that data with actionable contact information. This is where Clay comes in. By using Webhooks, Leadfeeder automatically pushes company-level data into Clay, allowing you to enhance and refine your prospect lists using AI-powered enrichment.

## Receiving Leadfeeder data in Clay

With the integration set up, Clay will now receive essential company details from Leadfeeder, including:

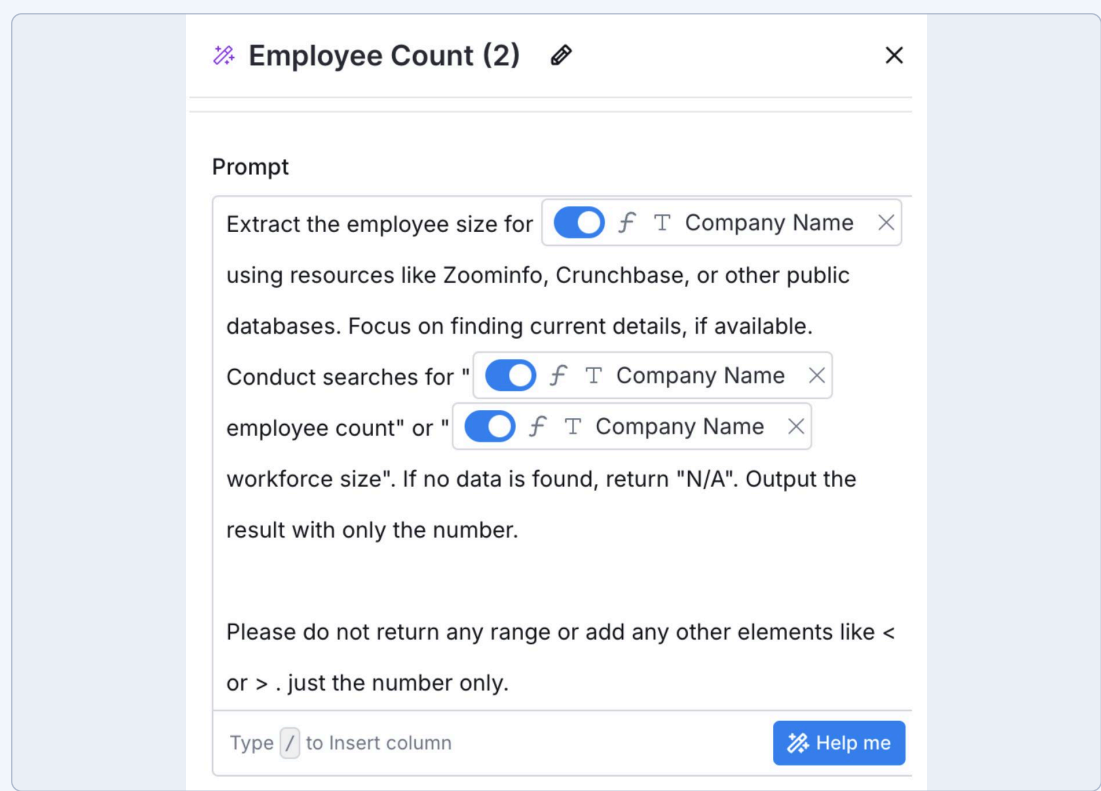

- **Company name** – the business that visited your website
- **Company website & industry** – context for outreach personalization
- **Employee count** – an important factor in determining company size and relevance

## Using ‘Employee Count’ to segment companies

Before diving into individual contacts, it’s important to classify companies based on size. This helps you prioritize outreach based on the type of businesses you typically target. For example:

- **Small businesses** (1-50 employees) – might require a different sales approach than enterprises
- **Mid-market** (51-500 employees) – often have dedicated decision-makers in key roles
- **Enterprise** (500+ employees) – typically involve multiple stakeholders and longer sales cycles

By segmenting companies by size, you can tailor your outreach strategies accordingly.

## Extracting decision-makers with AI

Now that we have company-level data, Clay’s **AI-powered enrichment** can help identify the key people within those organizations. Instead of manually searching LinkedIn or company websites, Clay automates this process by:

- **Identifying relevant job titles** – searching for roles like "Head of Sales," "Marketing Director," or "Revenue Operations Manager" (depending on your ICP).
- **Finding LinkedIn profiles** – extracting direct links to decision-makers’ LinkedIn pages.
- **Filtering by seniority & department** – ensuring that outreach is focused on true decision-makers rather than lower-level employees.

## Automating email discovery with email waterfall techniques

Once we have a list of decision-makers, the next challenge is finding their email addresses. Clay uses an email waterfall technique, which works like this:

- **Step 1:** check public databases – Searching for verified emails in sources like Hunter, LeadMagic, or Prospeo.
- **Step 2:** use email pattern recognition – Predicting emails based on common formats (e.g., first.last@company.com).
- **Step 3:** AI-powered verification – Validating emails to ensure they’re deliverable and reducing bounce rates.

By automating this process, you get clean, verified contact data, eliminating guesswork and allowing your sales team to reach out with confidence.

## Step 3: Generate AI-powered outreach sequences with Twain

Now that you’ve identified high-intent website visitors (Leadfeeder) and enriched their contact details (Clay), it’s time to engage them with personalized outreach. This is where Twain comes in. Twain is an AI-powered tool that automates multi-channel prospecting while keeping messaging relevant and human-like.

### Generating AI-personalized email & LinkedIn sequences

Rather than sending generic cold emails, Twain uses AI-driven personalization to craft outreach sequences tailored to each prospect. This means:

- **Dynamic email content** – AI adapts messaging based on industry, job title, and company engagement data.
- **Contextual LinkedIn outreach** – AI-generated connection requests reference recent website activity or shared interests.
- **Smart follow-ups** – instead of robotic follow-ups, Twain adjusts messaging based on previous interactions (e.g., if a prospect opened an email but didn’t reply, the AI tweaks the next touchpoint).

By automating personalization at scale, you maintain a human touch without manual effort.

## Setting up multi-touch outreach

Effective outreach requires more than just a single email. Twain allows you to orchestrate a multi-touch engagement strategy across multiple channels:

- **Cold email sequences** – AI-generated emails that adjust tone, length, and content based on intent signals.
- **LinkedIn connection requests** – automated yet personalized messages to warm up prospects before direct selling.
- **Slack alerts for your team** – notify sales reps in real time when a prospect engages, ensuring quick follow-ups.

With this structured approach, you can ensure that every lead is nurtured across multiple channels, increasing response rates and pipeline conversion.

### 1st email

Hey Alina,

Saw your team visited our website leadassassin.com recently.

Would you like to connect over a quick Zoom call to see how we can automate your sales ops using Clay? You will walk away with a ready-to-target lead list and a strategy (outbound, inbound, or RevOps).

Let me know if you are interested.

### 2nd email

Donal, you might be concerned about how new automation tools could integrate with your existing sales processes.

That's a valid concern and it's something many directors think about.

Is it fair to assume this is something on your mind too?

### LinkedIn Message

Great to connect, Donal. Saw that one of your team members visited our website leadassassin.com recently.

Would you like to connect over a quick Zoom call to see how we can automate your sales ops using Clay? You will walk away with a ready-to-target lead list and a strategy (outbound, inbound, or RevOps).

Let me know if you are interested.

## Step 4: Align sales & marketing for higher conversions

Once you've identified, enriched, and segmented high-intent leads, the next crucial step is ensuring seamless execution between Sales and Marketing. To maximize conversions, these leads need to be automatically distributed across your outreach channels while keeping teams aligned in real-time.

This step relies on [HeyReach](#), [Instantly](#), and [Slack](#) to ensure that leads are engaged through multiple touchpoints and tracked efficiently.

### Automate LinkedIn outreach with Heyreach

Heyreach allows you to scale personalized LinkedIn outreach by automating connection requests and follow-ups. Once leads are enriched in Clay, they can be pushed to Heyreach, where the platform:

- Sends personalized connection requests to decision-makers
- Automates LinkedIn messages in sequences based on engagement levels
- Tracks responses and replies, so SDRs can focus on warm prospects

With Heyreach, your team can efficiently engage leads on LinkedIn without manual effort, ensuring timely follow-ups with high-intent visitors.

### Push leads to instantly for cold email sequences

While LinkedIn is great for social selling, email remains a key driver of outbound success. Instantly enables high-volume cold email outreach with personalization and automated follow-ups. Once leads are enriched, they can be pushed into Instantly, where:

- Custom email sequences nurture leads over time
- AI-based personalization tailors outreach for each recipient
- Automated follow-ups ensure no lead is left untouched

By integrating Instantly, you create a multi-channel approach, engaging leads via both LinkedIn and email, increasing your chances of a response.

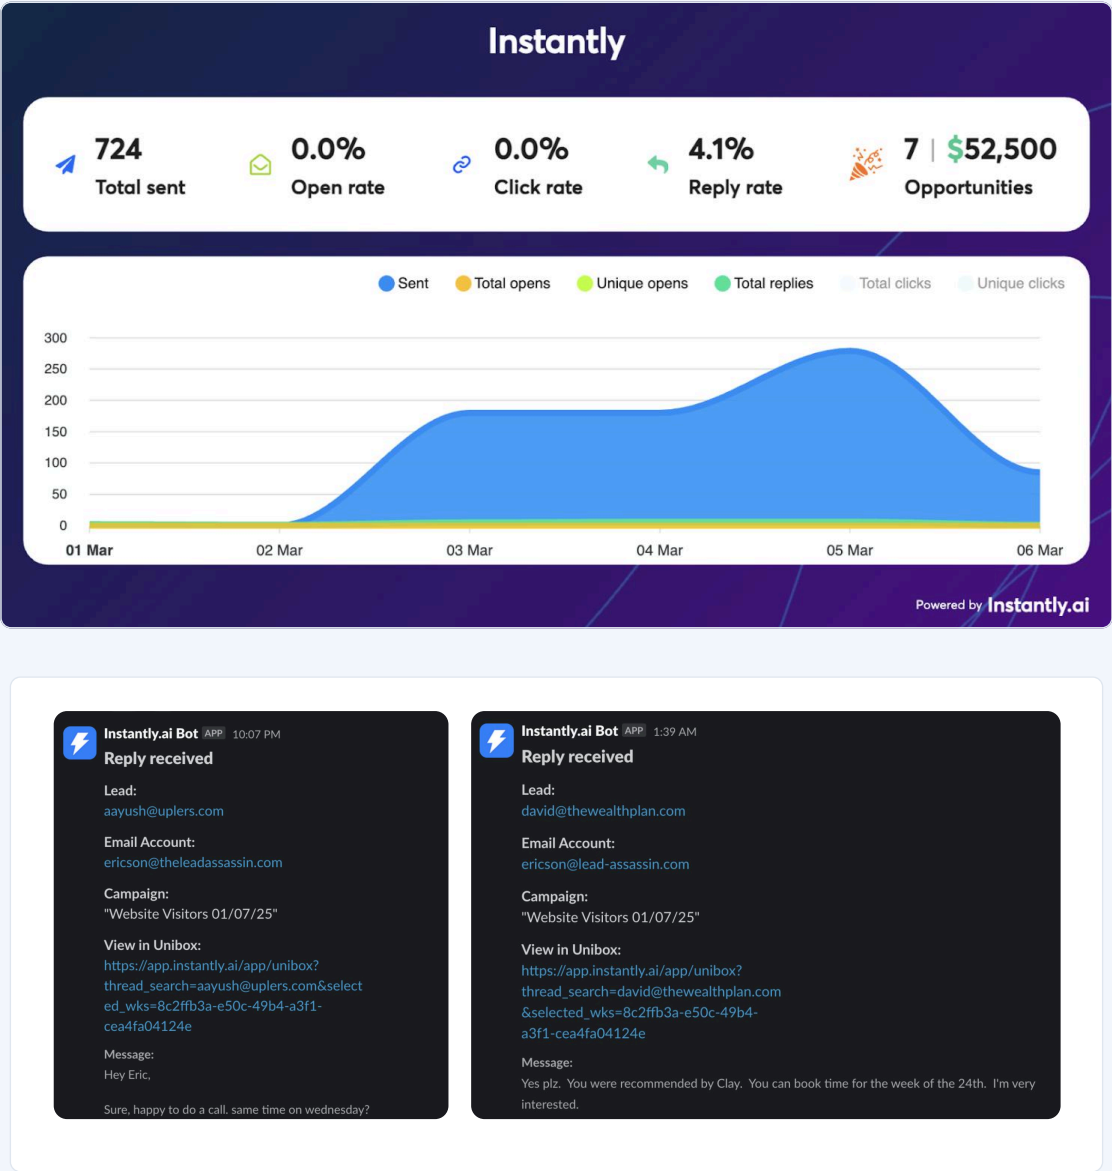

### Send Slack notifications for real-time tracking

To keep sales and marketing teams aligned, lead activity should be surfaced in real-time. By sending Slack notifications, teams can:

- Get instant alerts when a high-intent visitor is identified
- Receive updates when a prospect responds on LinkedIn or email
- Coordinate outreach between sales & marketing without missing opportunities

For example, if a prospect opens an email multiple times or engages with a LinkedIn message, a Slack notification can trigger a timely follow-up from a rep, helping to boost conversion rates.

## **This playbook was brought to you by Dealfront**

Dealfront is the go-to-market platform for Europe that gives businesses everything they need to win leads and close deals.

Dealfront's multilingual AI understands the nuances of European data, so it can access data and insights that other tools can't, all within Europe's complex compliance standards.

**Dealfront – The way to win deals in Europe.**
