

WATER PERFORMANCE STUDY

3R
REDUCE
REUSE
RECYCLE

Why carry out a water performance study?

The study enables manufacturers to assess their performance and quantify their plant's potential. This audit represents a **strategic lever** for your industrial site. Although not mandatory, this process allows you to:

- Assess water performance and **quantify the potential for optimization**
- Evaluate your compliance with current regulations
- Identify the true cost of your water consumption
- Research and evaluate **optimisation solutions**
- Develop a roadmap for **cost-effective water-saving projects**
- Develop solutions tailored to your specific challenges, ranging from basic water conservation to advanced projects involving the **reuse of treated wastewater** in short-loop or full-loop systems

The benefits of Ekium

- Men and women with hands-on experience
- 30 years of operational expertise across multi-sector industrial sites
- Practical solutions with comprehensive, tailored support right through to implementation
- Expertise in measurement campaigns across an entire site

Target markets / Sectors

Manufacturers, CSR professionals, technical managers, senior executives...

They trust us

A STRUCTURED APPROACH

TOPICS COVERED

Input from the upstream process

Network consumption

Consumption of cooling systems

Consumption of cleaning-in-place products

Wastewater treatment
