

PRODUCT & ENGINEERING

Find and fix faster

When something breaks, Product and Engineering teams need clear visibility into what happened—without wasting time reproducing issues or debating root causes. Without shared context, development slows down, QA becomes manual, and teams risk shipping fixes that don’t fully solve the problem.

Fullstory brings Product and Engineering together around a shared source of truth, helping teams see what users saw, understand why it happened, and resolve issues faster with confidence.

FULLSTORY SOLUTION

Fullstory captures every interaction automatically, giving teams a complete view of the user journey and the technical data behind it. Session replay, Dev Tools, and console logs reveal what went wrong, while StoryAI provides instant summaries of user actions and errors. Product managers can validate fixes and track improvement over time, no additional tagging or instrumentation required.

MEANINGFUL OUTCOMES

- ✓ Find and resolve issues faster
- ✓ Align Product and Engineering
- ✓ Release with confidence

WHAT WE SOLVE

Lost time

Shared behavioral evidence eliminates manual reproduction and lengthy QA cycles.

Communication gaps

Both teams work from the same session context to confirm and validate fixes.

Inefficient workflows

StoryAI surfaces key actions and errors automatically, reducing investigation time.
