

IT & INTERNAL SUPPORT

Mitigate incidents with real-time experience signals

Even small moments of user friction can signal bigger system issues ahead. Traditional monitoring tools often miss these early warning signs, leaving IT teams reacting after incidents occur. Fullstory helps teams detect problems as they emerge, using behavioral signals to spot risk faster and prevent downtime.

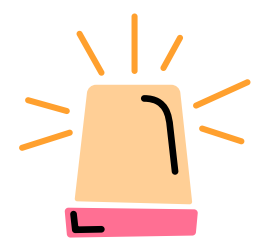

FULLSTORY SOLUTION

Fullstory tracks frustration indicators like rage clicks, failed actions, and abnormal drop-offs to reveal patterns that precede outages or performance drops. Real-time alerts surface these issues the moment they occur, and integrations with tools like Slack, PagerDuty, and Jira ensure the right teams can act immediately. By pairing behavioral data with existing monitoring, IT teams gain the complete picture they need to stay ahead of incidents.

MEANINGFUL OUTCOMES

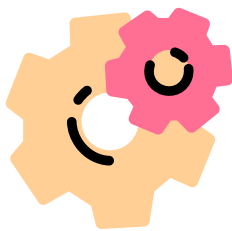

- ✓ Earlier detection and faster triage
- ✓ Reduced downtime and incident impact
- ✓ Greater confidence in release stability

WHAT WE SOLVE

Catch early warning signs

Identify friction patterns before they escalate into larger incidents.

Streamline incident response

Alert the right owners automatically and provide full session context.

Prevent downtime

Act on real-time behavioral insights to stop issues before they spread.
