

IT & INTERNAL SUPPORT

# Simplify compliance and strengthen digital governance

Maintaining compliance across complex systems requires clarity and consistency. Traditional monitoring tools capture logs but miss the full story of what happened—and how it was fixed. Fullstory provides a complete, auditable view of every interaction so IT teams can ensure reliability, traceability, and accountability across their digital environment.

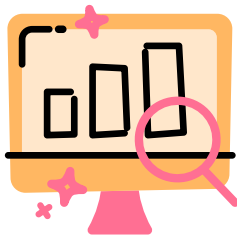

FULLSTORY SOLUTION

Fullstory captures every user interaction alongside technical data, creating a verifiable digital record of system behavior. Teams can document incidents, validate fixes, and easily share evidence during audits. With behavioral context integrated into existing tools, IT builds stronger governance without adding extra steps or manual reporting.

MEANINGFUL OUTCOMES

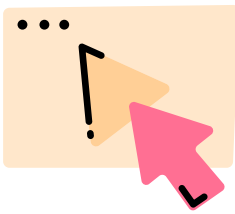

- ✓ Simplified audit and compliance reporting
- ✓ Improved accountability across IT and Engineering
- ✓ Greater confidence in system reliability and data integrity

WHAT WE SOLVE

Enhance visibility

See exactly how systems behaved during incidents to support compliance and reporting.

Reduce manual effort

Automatically capture and organize session evidence for audit readiness.

Strengthen governance

Empower IT and Internal Support to prove reliability and compliance with confidence.
