CMiC Pay Request

CONSTRUCTION SOFTWARE. EVOLVED

Progress payments. *Simplified.*

CMiC Pay Request offers construction companies an efficient way to manage their payments by delivering a solution to manage progress payments all in one place (cmiccollaborate.com) – across companies, projects, geographies, and business units.

KEY FEATURES & BENEFITS

Simplified Workflows

CMiC Pay Request workflows shorten the review and approval times to ensure timely payments.

For a general contractor, Pay Request increases the efficiency of the payments process and allows teams to focus on productive activities.

Efficient Collaboration

Track change orders and related documentation with defined workflows and smooth communication between collaborating partners.

Change orders approved in the CMiC ERP system synchronize directly with Pay Request, ensuring that subcontractors bill GCs for approved amounts and scopes – driving accuracy and compliance.

Automated Statutory Documents

The CMiC Pay Request portal automates the generation of lien waivers and certificates of payments.

GCs receive lien waivers with their subcontractors' Pay Request submission for their projects. Without these, subcontractors may face delays in getting paid. CMiC Pay Request solves this issue by automating the process to produce statutory documents.

Native Functionality – No Integrations

The CMiC Pay Request portal eliminates errors and rework from duplicate data entry. Pay Request is available as a native capability within CMiC's ERP platform. As such, data pulled from the ERP provides real-time updates for payment acceptance, processing and payments.
