Quality & Safety

INTRODUCTION

Within the construction industry, it's critical to establish appropriate standards for construction quality and jobsite conditions as well as closely monitor ongoing progress and the state of the project on the ground. This is to ensure that these standards are met and maintained.

Doing so is essential to providing a safe working environment for field workers and delivering quality results.

While these processes are important to follow, they can also costly and time-consuming. By leveraging improvements in technology, many firms have streamlined these processes, making them easier, more reliable and more cost-effective. Utilizing CMiC's Quality and Safety features will allow you to stay on top of these processes by tracking them in real time to keep your project team safe and optimizing your operations.

FEATURES

Checklists
Ensure that procedures are followed, standards are adhered to, critical details are monitored, and any deficiencies are identified and documented

Issues
Proactively identify, track and address safety and quality issues

Daily Journals
Track activities, construction progress and safety incidents in real-time

Punch Lists
Ensure that subcontractors and vendors follow-up with and complete outstanding tasks

Customized Checklists

Standardize tasks, procedures and policies with checklist templates which are tailored to the specific needs of your project and organization.

Issues

Ensure that project teams are notified of critical issues and that the issues are properly documented, prioritized and addressed to minimize their impact on project delivery.

Issue Tracking

Identify and document problems and potential issues directly from the checklist execution screen.

Daily Journals

Keep the entire project team up to date by tracking daily progress and activities.

Linking Records

Provide visibility and easy access to relevant information.

Trade Maintenance

You can now set default contacts and descriptions for individual trades to speed up the process of creating punchlist items.

Quality & Safety

The failure to prevent construction defects, planning oversights or jobsite injuries can be costly to construction firms. For this reason, performing quality assurance checks, safety audits and tracking daily activities are critical to ensuring that projects are delivered safely, on time and within budget. This is where CMiC Quality & Safety comes in.

With our solution, you can monitor all jobsite tasks in a collaborative environment — organizing and streamlining processes and activities by using the built-in checklists, daily journals, issues, and punch lists

CMiC delivers complete and unified Financials and Project Management solutions for construciton and capital projects firms. CMiCs robust software transforms how firms optimize productivity, minimize risk and drive growth by planning and managing all financials, projects, resources, and content assets — from a Single Database Platform™.
