

Project Management: Photo Report

INTRODUCTION

One of the ways construction teams navigate through the complex world of construction is by placing a strong focus on project documentation.

To ensure that construction projects are executed seamlessly and are completed on time and on budget, it's essential that all components of a project are documented properly and that stakeholders have access to the most up-to-date project information.

From architectural floor plans to specifications for industrial facilities, CMiC's Drawing and Construction Documents application integrates all your construction documents into one ecosystem using advanced document management tools. Keeping all your documents on a Single Database Platform™ makes indexing automatic, and organization and retrieval easy.

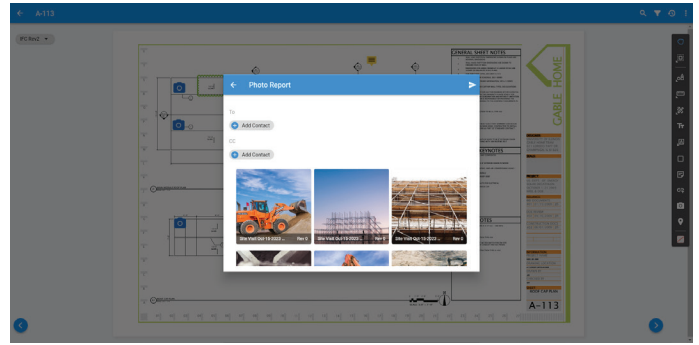

PHOTO REPORT: OVERVIEW

A key feature within our Drawing and Construction Documents application is the Photo Report feature, which provides you the ability to assemble and display a selection of project photos in a PDF file. Each photo is laid out in an organized fashion and contains relevant details such as document ID, title, and location. This report is a useful way to monitor work progress by reviewing photo documentation over the course of a project. In fact, when you review a report, clicking on any of the photos will automatically launch Construct PM and open the selected record.

Essentially, this photo reporting tool is designed to provide you with a comprehensive overview of all photo annotations and attachments within each construction project — this plays a role in increasing safety levels, maintaining project quality, and optimizing project delivery.

KEY FEATURES

-  **Easy-to-Use Drawing-Based Reports**
 - By design, our Photo Report feature seamlessly generates reports based on all photo annotations within a drawing sheet. This functionality will provide you with access to review project images.
-  **Comprehensive Overview of the Entire Project**
 - You can generate reports that offer a comprehensive view of your projects by consolidating all relevant information into a useful format.
-  **Improved Traceability**
 - To help manage the intricate details of a project, our Photo Report feature adds a layer of transparency by linking photos to annotations and attachments.
-  **Integration of the Project Document Log**
 - Built to integrate to the project document log, this feature will provide you with the ability to create reports that include thumbnails of all attachments from a specific folder, thereby driving efficiency and informed decision-making.
-  **Customizable Reports**
 - You can customize Photo Reports based on their specific business requirements.
-  **Accountability**
 - This feature enables users to track changes, make updates, and identify issues related to specific drawing sheets, locations, or time periods.
-  **Enhanced Communication**
 - Through the use of detailed annotations and attachments, our Photo Report can be used as a powerful communication tool to provide visual updates to project developments or progress — this delivers transparency and improves customer satisfaction.
-  **Agile Documentation**
 - Our Photo Report feature not only captures project developments but can also be used to support audits and drive continuous improvement.

BUSINESS BENEFITS

-  **Comprehensive Insights**
 - Given the complex and detailed nature of most construction projects, our Photo Report equips you with a comprehensive view of your projects to gain holistic insights.
-  **Accelerated Efficiency**
 - The Photo Report functionality automates the process of manually collating photos and attachments, saving time, and ensuring that project information is readily available to team members.

PHOTO REPORT

In an industry where design plays a pivotal role, using a robust tool that optimizes the process of managing and presenting visual data is mission critical to ensuring success. Our Photo Report feature not only streamlines workflows, but also helps to enhance collaboration, decision-making, and overall project visibility.

CMiC delivers complete and unified Financials and Project Management solutions for construction and capital projects firms. CMiC's robust software transforms how firms optimize productivity, minimize risk and drive growth by planning and managing all financials, projects, resources, and content assets — from a Single Database Platform™.
