

# Forecast With Confidence

## TURN YOUR DATA INTO ACTIONABLE INSIGHTS WITH CMiC'S SINGLE DATABASE PLATFORM™ ERP

**W**hen everyone on your team works with a single database, no one needs to spend any time manually re-entering data—or worse, accidentally duplicating it. Your office team can trust the data they see because their colleagues have entered it directly from a jobsite, allowing the office staff to create—or update—project forecasts with confidence.

Your forecasting models depend on the most accurate and timely data available, and that's only possible when you run your entire business with a system that's built on a single database architecture. Accurately marry your invoices and expected costs with actual work completed. With software built on a single database platform, you can track more than just dollars and cents—your field team can record schedules, manhours and actual work completed, and your accounting staff can ensure the accuracy of the invoices they receive and the payments they make. Office staff can also use this information to update forecasts and workflows, ensuring management has the most accurate view of every project.

Gain complete visibility over your data and make better business decisions by using CMiC's custom dashboards.

Your office and field teams expect to make quick and well-informed decisions—all the time. With a single database, everyone always has immediate access to enterprise-wide information that is unified, contextualized and presented to support action.

**“**With CMiC's single database platform, AGI is now functioning at a higher level than ever before. We optimized our forecasting and we know our numbers better than ever.
