

The new CMiC FIELD R12 for mobile devices is the field-focused app you want your construction crews to bring to the jobsite. Taking a mobile-first approach, the re-platformed and redesigned app elevates field productivity to the next level, transforming how contractors unify all project processes, resources, and data to deliver consistent results – while enabling them to effectively manage projects from the construction site.

## Intuitive Design

Get up close with the new CMiC FIELD R12 app – which benefits from a completely reimagined, grounds-up development program. The result is a modern layout that offers a superlative user experience. The redesign displays more information on the screen, and users will find that it is intuitive to create, view and modify records.

## Speed & Simplicity

Experience simplified workflows and significantly better performance. Uploading progress photos and pulling up the latest plans on mobile screens is now a breeze. Faster workflows and easy access to everyday functions enabled by an improved user interface means users can do more in less time without getting bogged down by complexity.

## A Step Function in Productivity

Invite your collaborators to use the tool, enabling seamless synchronization between architects, engineers, onsite project teams and the back office. Accessing actionable project data right from the mobile device is easy – whether a user is fully connected or temporarily disconnected at remote worksites. Teams can record and view daily jobsite activities, weather, resources and labor productivity from their mobile devices, in addition to responding to RFIs and change order requests in real-time.

## Communicate, Coordinate, Collaborate

Guide important communication between on-site, off-site, and back office staff in real-time – with instant access to critical, up-to-date and actionable information. This allows teams to coordinate effectively and press forward to resolve issues quickly. Similarly, change orders and punch list items can be viewed by collaborating teams, allowing them to always be working from the latest plans, thereby reducing rework and delays. Since the project manager has visibility into the comment history and logs, construction crews need to spend less time monitoring and replying to emails and more time getting work done.

Whether your team uses an iOS or Android device, CMiC's Mobile FIELD R12 connects you anywhere, at any time, whether fully connected or casually disconnected.

## Smart Access to Drawings & Documents

Empower users to keep up with the most up-to-date information while working in the field. Hundreds of drawing sheets – which are routinely generated during the project – can be accessed, marked up and shared as soon as users enter the app, allowing them to advance and complete projects with transparency and confidence. The tool also offers new ways to sort and filter drawing sheets based on user preferences. Improvements made toward the search feature allow users to search for specific terms that are found within a drawing sheet's name, or within a drawing, reducing time and effort while increasing accuracy and efficiency.

## Full Access Offline

CMiC allows you to take your work wherever you go with features that work offline and will sync up once users reconnect to the Internet. The ability to work offline is important for field teams. CMiC has addressed this requirement by allowing users to automatically download drawings to devices and by making records and documents available as long as they are accessed prior to going offline.

## The Bottom Line

With the new CMiC FIELD R12 app for mobile, you have a product that keeps every member of your construction team informed, engaged and productive – every step of the way. Firms can fully rely on the full array of mobile capabilities to organize and share information – quickly and accurately – so that teams make better decisions faster, get more work done, and consistently fulfill customer expectations.

## Manage All Aspects of Your Projects – In One Place
