CONSTRUCT

Project Management for Mobile

INTRODUCTION

With construction project teams working out of different locations, and at times, varying time zones, providing mobile functionality is mission critical to ensuring that projects are delivered on time. This is made possible by providing project teams access to real-time data, which facilitates collaboration and heightens communication.

With our CONSTRUCT Project Management application for mobile, you have the ability to keep project teams informed, engaged and productive – every step of the way. You can rely on the full array of mobile capabilities to organize and share information so that your teams can accelerate project timelines, make data-driven decisions, and consistently meet customer expectations.

APPLICATIONS UNDER CONSTRUCT PROJECT MANAGEMENT

✓ Bidding & Procurement
- Subcontractor Pre-qualification
- Invitation to Bid
- Bid Leveling (Analyzing Bids)

✓ Construction Documents
- Drawings
- Specifications
- Submittals
- RFIs

- Job Costing
- Job Billing
- Change Management
- Subcontractor Management

✓ Quality & Safety
- Customized Checklists
- Issue Tracking
- Daily Journals
- Linking Records
- Trade Maintenance

BUSINESS BENEFITS

☑ Intuitive and User-Friendly Design

• Take advantage of this application's new state-of-the-art design and layout, which offers you superlative user experience.

• This new design displays more information on each screen, and it is easier to users to create, view and modify records.
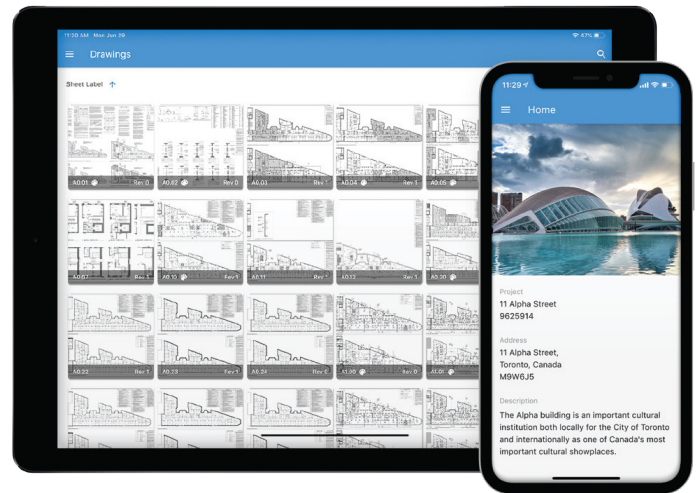

☑ Real-Time Access to All Project Data

• Experience simplified workflows and improved application performance.

• Upload progress photos and pull up the latest plans on mobile screens in a fraction of the time.

• View streamlined workflows and take advantage of easy access to everyday functions enabled by an improved user interface.

📋	Requests for Information (RFIs)	📋	Punchlists
📤	Submittals	🗂	Drawings
📄	Documents	📋	QA / QC & Safety Checklists
🖼	Progress Photos	⛅	Daily Journals

☑ Boosts Productivity

• Teams can record and view daily jobsite activities, resources and labor productivity from their mobile devices, in addition to responding to RFIs and change order requests in real-time.

☑ Heightens Collaboration and Communication

• Invite your collaborators to use the tool and facilitate the seamless synchronization between architects, engineers, onsite project teams and the back office.

• Guide important communications between on-site, off-site, and back-office staff in real-time – with instant access to key project information (including comment history and activity logs).

• Change orders and punch list items can be viewed by collaborating teams - this allows them to work off the latest project plans, thereby reducing rework and delays.

☑ Provides Smart Access to Drawings and Documents

• Hundreds of drawing sheets – which are routinely generated during project execution – can be accessed, marked up and shared as soon as users enter the app. This enables them to complete projects with transparency and confidence.

• Explore the new ways to sort and filter drawing sheets based on your preferences.

• Search for specific terms that are found within a drawing sheet's name, or within a drawing – this helps to increase efficiency and accuracy.

☑ Offers Offline Capabilities

• Take advantage of this application's offline functionality, where the application will sync up once you have connectivity.

• Automatically download drawings, records and documents to your device.
