

Continental 
The Future in Motion

The reliable winter expert: safe and efficient.

The new
VanContact™ Winter.

New!

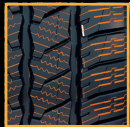

- › Shorter braking distances and improved traction on snow
- › High aquaplaning safety and shorter braking distances on wet roads
- › Improved rolling resistance

Your ideal companion for the winter season.

Winter safety for vans and transporters.

Technical highlights.

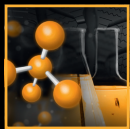

Shorter braking distances and improved traction on snow.

The optimised sipes concept with sinus sipes in the pattern centre and broken scale like structure in the shoulder blocks increases the number of gripping edges in longitudinal direction, which ensures better interlocking with the snow and leads to shorter braking distances. Furthermore, the zigzag-shaped longitudinal grooves and evenly arranged snow pockets in the shoulder blocks enhance the compression of snow in the grooves for increased snow-snow grip and improved traction in the snow.

High aquaplaning safety and shorter braking distances on wet roads.

Through the wide longitudinal and lateral grooves the water displacement by the grooves is optimised, which ensures high aquaplaning safety. Additionally, the 3D sipes in the pattern centre support each other and reduce the deformation of the pattern blocks, leading to shorter braking distance on wet roads.

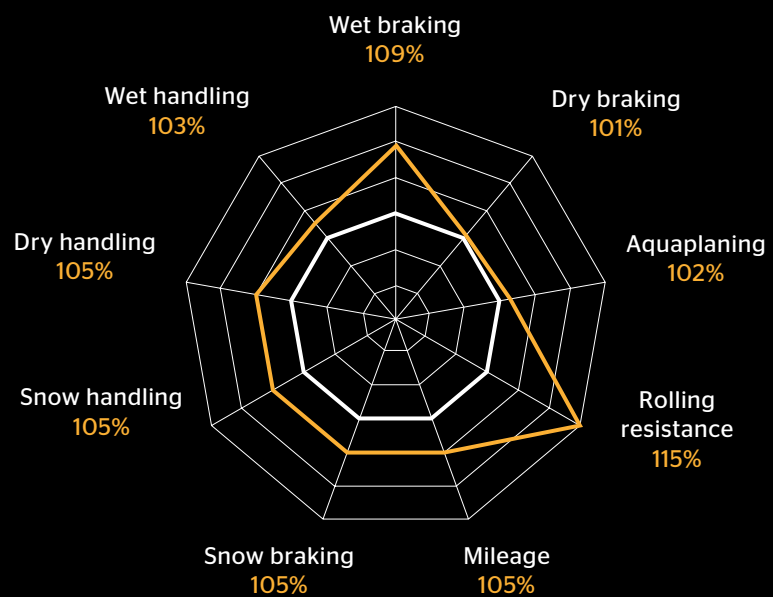

Improved rolling resistance.

The new silica compound reduces the deformation of the tyre whilst rolling in, saving energy and improving the rolling resistance.

Tyre performance.
