

Kennispark

Business Walk

Internships and traineeships for 2018
Kickstart your career @ Kennispark Twente

Prime location for enterprising talent and innovation

Kennispark Twente is one of eight important innovation campuses in the Netherlands. Here, everything revolves around talent! Students, scientists, government, businesses and their employees work together on innovative solutions for the social issues of the future. Explore your study and career opportunities at this unique campus!

The Twente region is known in Europe for its excellence in top technology.

The University of Twente with its leading research institutes, open innovation centres and hundreds of high-tech companies: together, they form High Tech Twente. The region is a breeding ground for new market leaders and innovative technological niches. In addition to Kennispark Twente, High Tech Twente also includes innovation hubs Technology Base and High Tech Systems Park.

Our accomplishments

Students, researchers and companies at Kennispark Innovation Campus focus on ambition and entrepreneurship. Together, they work on challenges in the fields of:

- Personalised healthcare technology
- Intelligent manufacturing systems
- Smart materials
- Digital society
- Resilient world

Find an internship or part-time job.

Your career starts here at Kennispark Innovation Campus! You can start at innovative high-tech companies based close to the university immediately, either in addition to your studies or after your educational programme. You could not ask for a better kick-start to your career! Kennispark Twente promotes knowledge exchange through collaboration between companies, the education sector, research and government. This collaboration ensures talent continues to develop at Kennispark. Companies seek to attract your talent and offer internships, final thesis projects and part-time jobs. This guide provides a summary of the current offering. Is your ideal internship not included? Then have a look at [Twente.com](https://www.kennispark.com) under Studying, to find out about other opportunities.

**“You fulfil your
ambitions at Kennispark
Innovation Campus”**

Groundbreaking research and product development

—

Kennispark Twente is a breeding ground for prestigious companies that are making advances both nationally and worldwide.

The line-up of companies that started here as spin-offs or start-ups and soon developed into leading world players is impressive. Everyone is familiar with Booking.com, Thuisbezorgd.nl and Bluetooth technology.

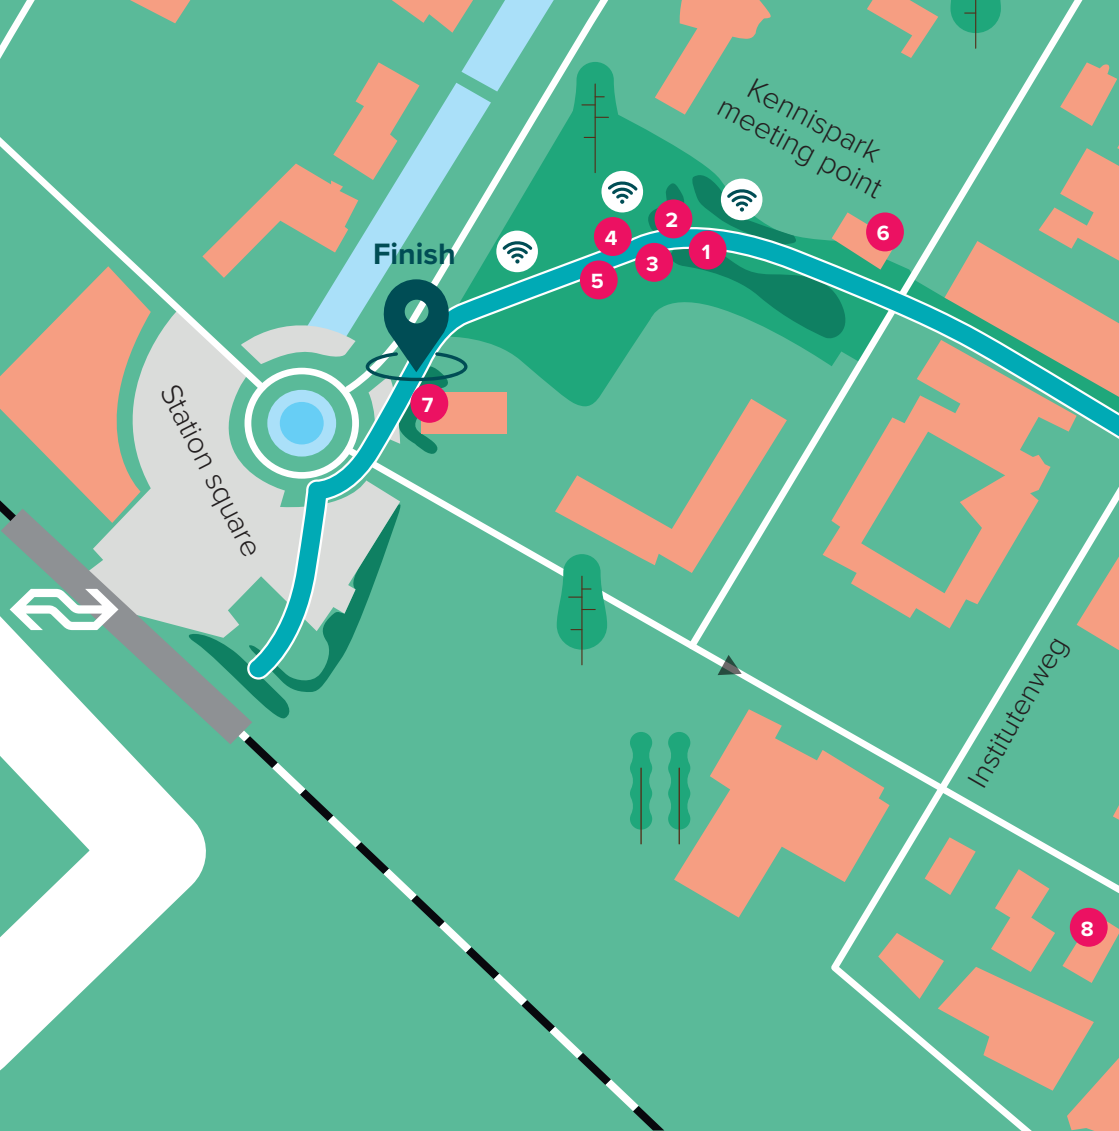

From start-up to next unicorn

High-end technology supplier Demcon began as a start-up and in recent years rapidly developed into a mid-sized company with over 400 employees. Newcomer Sci Sports is regarded as the so-called Next Unicorn: potentially worth over a billion dollars in the future! Other game-changing, rapidly growing innovators are Xsens, Indes, Fortes, Maser, HoSt, Sigmax, Undagrid, Lionix, Clear Flight Solutions, and Micronit. Will you start your career with one of these top companies?

Do you have an innovative idea of your own? Or a high-tech development you wish to bring to the market?

The business developers at innovation accelerator Novel-T would be delighted to help you with the first steps. Make an appointment via novelt.com.

Remember:
you fulfil your ambitions at
Kennispark Innovation Campus!

Kennispark Vacancies

You can find the current vacancies offered by companies based at Kennispark on the following pages. You literally walk to work from the campus! Apply via the point of contact and who knows, your career in Twente may start as soon as tomorrow! You can also find the vacancies online: kennispark.nl/nieuws.

Traineeship Factory Engineer

VDL ETG, Almelo

As Factory Engineer you will be part of a multidisciplinary team of around 60 people. This team responds to requests from customers and is perpetually occupied with assembly and the realization of mechatronic subsystems. As a trainee you will be given the opportunity to develop into a professional. You will not only hone the skills in your own field, but simultaneously experience how it is to work at VDL(Van Der Leegte): the atmosphere, the people, the work and the extensive opportunities that VDL has to offer you in your development to a professional and beyond.

What is the traineeship about?

In a high-tech environment, the trainee factory engineering is responsible for the arrangement, support and improvement of the assembly process of mechatronic systems. Besides implementing structural improvements the trainee is the key technical contact between assembly and the factory engineers. In addition, you will offer technical support to customers. You input the correct assembly steps and make the routing in the BAAN ERP system. You are responsible for the organization of production with the goal of optimizing product quality, progression and efficiency in mind.

Your activities consist of but are not limited to:

- Initiating improvement plans and efficiently executing these plan
- Functioning as a sparring partner our customer, suppliers, the department assembly and engineering, usually regarding technical matters
- You are responsible for quality assurance of products to be delivered
- You implement and facilitate Lean manufacturing tools
- You assure the application and compliance of health and safety legislation in projects and in the department

Company profile

VDL ETG Almelo develops and produces complex and innovative modules and system considered impossible by many. We work on the development of computer chips, combatting disease, researching the universe and many more fascinating fields. With a team of roughly 500 enthusiastic and driven colleagues we develop and produce high tech equipment. We do the aforementioned for international clients in the semiconductor, solar, medical and aerospace industry. Working at VDL ETG means that you are part of the international industrial family business VDL, where continuity is highly valued. Cooperating in a professional manner in an informal, no nonsense environment where open communication predominates. There is lots of room for personal development and entrepreneurship. Besides this VDL boasts excellent terms of employment, and there are numerous possibilities to grow within VDL.

Internship Extrusion Equipment

Mercatel Groep BV, Enschede

Are you interested in plant scale rotating equipment for the polymer industry? Would you like to understand assembly drawings and maybe supervise some overhauling job?

What is the internship about?

You will learn to understand the assembly drawings and its parts list of all the major equipment involved like gear reducers, mixers, extruders, gear pumps, screen-changers and pelletizers in order to identify the (spare) parts like bearings, couplings, pumps, rotary joints, seals, etcetera. You will be asked to participate in the discussion of solving (mechanical) issues and to determine the necessary spare parts in case of the overhauling of the major equipment. A visit to a plant to meet the mechanical engineers of the plant could be helpful in understanding. Most likely you will also supervise one or more overhauling jobs of a die-plate (part of a pelletizer).

Company profile

Mercatel Groep BV is supporting Kobe Steel Ltd (JP) for more than 20 years in the after sales service of their plant scale mixer and extrusion line's located at various main petrochemical sites in Europe.

Internship

Ecare Services, Enschede

Ecare believes in a different way of organizing care. Not a top-down approach, but one that hands the responsibility back to the caregiver.

What is the internship about?

We are a young, dynamic and everchanging company that uses the newest techniques. Which is why we can always use the help of an enthusiastic intern, that brings a fresh take on what we do here.

If you are looking for a challenging internship in a professional company with an informal atmosphere and passionate colleagues, then get in touch with us! Because we are an everchanging company, we don't have a standard internship description for you. During a conversation we will decide together what could be an interesting topic for you. Within this topic we will discuss how we could support you in reaching your internship goals and how you could support our company with your expertise.

Company profile

We develop smart and innovative software that supports better and affordable healthcare and that simplifies things for the caregivers. We call our product suite "Puur". It eliminates unnecessary paper work and overhead, so caregivers have more time to focus on the quality of their work and work more efficient.

Software Tester

Sigmax, Enschede

You are a team player, responsible and have affinity with XML, SQL or C #. Does this sound familiar? Sigmax is looking for Software Testers!

About the role

You help scrum teams of our mobile products with monitoring the test coverage and to ensure that the correct test cases are performed for every shippable product increment. Within our five business units we use several ways of testing tools and techniques, depending on the product. Our end users want to work carefree and as a tester you will take care of the best user experience.

Come work at Sigmax and you will find out that we offer:

- An informal working environment
- To work for well-known and international clients
- Fresh fruit every day (to keep the doctor away)
- The opportunity to work with diverse technologies that are supportive to our continuously developing products
- Friday afternoon drinks with colleagues

About you

- Love to analyse and you are curious
- Software bugs don't follow the rules: we expect you to do the same
- Triggered to find solutions and make our software better
- Affinity/experience with: Automated Cross-Browser Testing, Automatic Testing, TMap and ISTQB Foundation

Explore the world behind Sigmax

- Head office in Enschede
- Testing for 100+ Dutch cities
- Over 200 colleagues
- Fast growing company
- 5 business units

Software Engineer

SigmaX, Enschede

Are you driven, structured and do you have affinity with C #, .NET or Angular? SigmaX is looking for enthusiastic and ambitious Software Engineers!

About the role

Within our five business units, we have different possibilities to gain experience and get prepared for your future career. For example, working with 4G / 5G, image recognition and real-time synchronization. Within our Android platform there are complex APIs, so you can engage in challenging real-time assignments.

Come work at SigmaX and you will find out that we offer:

- A welcoming environment
- Professional and fun colleagues and cool company outings
- To work with technologies like: Angular, Entity Framework, Visual Studio, NFC, IT based ticketing and cutting edge cloud connecting IT projects
- The opportunity to develop your skills with real-time assignments
- A workspace in our kick-ass building

About you

- A born software hero
- Affinity/experience with C #, .NET, Angular, TypeScript or (SQL) databases
- Eager to learn and good company for the team
- Motivated to make nice software

DevOps Engineer

Sigmax, Enschede

Can you tackle complex projects, do you enjoy challenging work and are you eager to make a strong impact? Sigmax is looking for a talented DevOps Engineer!

About the role

In the role of DevOps Engineer you'll develop apps and back-end solutions that you simultaneously manage and support. You are part of Sigmax's multidisciplinary team that's responsible for building, testing, deploying and operating CityControl, a multifaceted international application, used by thousands of enforcers and police units. You'll take care of solving escalated issues from our service agents and contribute to new software releases by closely working with developers.

Come work at Sigmax and you will find out that we offer:

- An informal working environment
- An ambitious vision for international growth
- To work with modern technologies
- Fresh fruit every day (to keep the doctor away)
- Friday afternoon drinks with colleagues

About you

- You're looking to improve your skills, both as developer as well as

(support) engineer

- You're knowledgeable about the most common platforms and frameworks used in developing and supporting applications
- Preventing problems happening again makes your clock tick
- You're familiar with scripting, databases and Android-development
- Responsibility is not a word that scares you

Explore the world behind Sigmax

- Head office next to the Kennispark rail station
- Market leader in government and transport software products
- Over 200 colleagues

Software Developer

Moneybird, Enschede (Roombeek)

Responsibility, agile, Ruby on rails, self-management, quality, test-driven development, financial accounting, flexible hours, fun, collaboration and innovation. That is Moneybird!

What is the internship about?

We have opportunities for internships, side jobs and full time vacancies. You can work on backend development, frontend, machine learning, devops, mobile and a lot more. We believe in cultivating a broad skill set, so you'll have the opportunity to learn a lot in little time. Every three months we choose two projects we are going to finish as a team in the next few months. Our main goal is to make the life of entrepreneurs easier. We want them to be able to spend as little time as possible on accounting, and as much time as possible on reaching their business goals. Besides our Ruby on Rails stack we use many other interesting technologies.

Company profile

Moneybird develops software for entrepreneurs, allowing them to send invoices and manage their finances. Our young team consists of 25 employees, about 50% are software developers. We like to cooperate, build amazing products and celebrate success. Besides working we love cake, (board) games, BBQ, free lunch and jaunts. If you'd like to join our team, please contact Jorieke.

Internship and Graduation

PCV Group, Enschede

You get to work at the heart of our development department where you will be involved in innovative and challenging engineering consultancy projects for our clients.

What is the internship about?

At PCV Group we are always on the lookout for young professionals, like you, that are in sync with our company culture. We facilitate personalized graduation & internship assignments for students with technical expertise and a talent for consultancy. E.g. we can provide you with an internship in which you will work directly with one of our clients, building a high-tech prototype, for a low-cost product, testing and analysing your own ideas. Or you will help us develop new technologies which will help us in future projects. We therefore need you to be technically skilled, practical, proactive and have a sense of responsibility. So... Are you interested?

Company profile

PCV Group is one of the largest technology development consultancies in the Netherlands. We are an independent partner in product and technology development of high-tech, low-cost products and key components for appliances in medical, consumer and industrial markets. Our expertise in dispensing and dosing system solutions & embedded systems allows us to work for global multinationals and manufacturers.

Contact information:

Ir. M Schreiber - Senior Engineer

Internship of 3 months

Synopsys, Enschede

Want to work in the cutting edge field of Photonics? We will cater our internship to developing your skillset based on your interests, background and field of study.

What is the internship about?

Together with you we will look at what subject would interest you and develop an appropriate assignment which is catered to your current knowledge and experience. We have various number of subjects that can be taken up and finished in 3 months time and we will make sure these assignments are relevant for your study.

For our assignments we are looking for people who have programming experience and have a practical aptitude. Some of the possible subjects, which can be taken up are:

- User interface subjects
- Development and improving training material
- User manual assignments
- Statistics, data processing
- Assignments related to Maxwell equations, geometrical calculations, graph theory, polygons, simulations
- Search options

Company profile

Synopsys is worlds #1 supplier of software for the semiconductor and electronics industry and in Enschede is the Photonics Solutions team. We develop, sell and support design solutions for Photonic Integrated Circuits, chips which are making use of photons instead of electrons.

Master thesis: Development of the Business Makeover Platform

InnoValor, Enschede

—

Help us develop our new product! The starting point is Business-Makeover.eu, a platform developed in the European research project Envision. Where do we go from here?

What is the master thesis about?

The BusinessMakeover platform supports SME's throughout Europe with their business model innovation questions. Currently, we are redesigning the platform to allow for integrated tool support.

With the growth of the number of digital tools in the platform, the potential for tool integration grows as well. E.g. results from a SWOT analysis can be used in a business model stress test. Results of the stress test form the basis for a roadmap. Such integrated tooling is possible on the basis of the underlying meta model that has been defined initially. Your research will further identify how business tools relate to each other and prove feasibility of tool integration both semantically and technically.

Company profile

InnoValor is a research-based consultancy and software company. As we are thought leaders in digital innovation, graduating at InnoValor promises to be an excellent learning opportunity for BIT students. With assignments combining knowledge about business model tooling and programming. We specialize in academic research, so we can offer you the right guidance in your graduation efforts.

Contact information:

Wil Janssen
jobs@innovalor.nl

Master thesis: mobile as an integrated ID

InnoValor, Enschede

At InnoValor we strongly believe our smartphone will become our integrated digital and physical identity. Implementing this in a secure way is a challenge.

What is the master thesis about?

With Mobile-as-ID InnoValor is building a unique solution with which a smartphone can be used for both online and physical identity verification. The solution will use the smartphone's security facilities, will partly run in the cloud and will be an 'enabler', a generic software that can be utilized as a component in numerous specific identity solutions.

The research question we propose: how to store credentials in a hybrid (local and cloud) manner, exploiting whitebox crypto, mobile OS features and, when available, local secure storage. The assignment should consist of literature research on current practice/state-of-the-art, a design phase, a PoC phase and an analysis of how secure the result is.

Company profile

InnoValor is a research-based consultancy and software company. We are looking for students that want to graduate on our topics: *digital trust* and *digital agility*. As we are thought leaders in digital innovation, graduating at InnoValor promises to be an excellent learning opportunity. We specialize in academic research, so we can offer you the right guidance in your graduation efforts.

Project manager, Fulltime position

No Nonsense Technical Solution, Enschede

—

**Are you a born leader and do you have a technical background?
We are looking for a fulltime project manager immediately.**

What is the fulltime position about?

Are you the core in the organization and do you take on many different responsibilities; within projects, in customer contact and organizational. Are you a born leader and are you going to lead multiple projects autonomously?

Then we are looking for you!

Preferred background:

For the expansion of our team we are looking for a candidate with the following profile:

- You have completed a technical WO Master program.
- You are a young professional (0-3 years of work experience).
- You have a commercial approach.
- You have leadership qualities.

- You have technically sufficient professional knowledge to keep an overview of all projects.
- You have good communication skills and you have a customer and service-oriented attitude.

Company profile

We offer you:

- A dynamic job in an inspiring environment.
- A big role within a company that is young and in full swing.
- A competitive salary.
- Attractive employment conditions.
- Information and interest.

Mechatronic system engineer

Demcon Advanced Mechatronics BV, Enschede

—

Would you enjoy developing ground-breaking new technologies in a multidisciplinary team? Join us as a mechatronic system engineer and take part in our complex projects!

What is the starter position about?

As a mechatronic system engineer you are, as part of a multidisciplinary team, responsible for the design of mechatronic system concepts for a wide variety of products and machines. After realisation of the chosen solution you are responsible for validating it yourself. With your ability to think conceptually you bring substantive coherence between the system requirements, the system concept and the system integration. You provide technical substantive support to the project manager, both during the acquisition and when transferring the project result to the customer.

Company profile

We are a high-end system supplier in the areas of high-tech, embedded, industrial & vision, optomechanics, unmanned and medical. We support our clients along the entire system development chain, from proof of principle, prototyping and pre-production to series production. The head office is situated in Enschede, with subsidiary locations in Son, Oldenzaal, Groningen, Delft and Münster (Germany). We have clients worldwide, from the Netherlands and Germany to Asia and the US.

WO Afstudeeropdracht Corporate Finance

de Jong & Laan accountants en belastingadviseurs, Zwolle

Heb jij passie voor fusies, overnames en strategische vraagstukken? Ben jij daarnaast ambitieus, gedreven en op zoek naar een uitdagende afstudeerstage waarin je alle mogelijkheden krijgt om jezelf te ontwikkelen? De Jong & Laan biedt jou deze kans.

Wat houdt de afstudeeropdracht in?

Tijdens je afstudeerstage zal je een opdracht naar keuze gaan uitvoeren. Voorafgaand zullen wij dan ook samen een duidelijke opdracht samenstellen, om zo aan de eisen van je opleiding te voldoen. Wellicht dat je zelf al een mooie opdracht voor ogen hebt. Natuurlijk hebben wij ook genoeg ideeën waar we graag over brainstormen! Daarnaast maak je deel uit van een ondernemend en enthousiast team waarin je jezelf kunt laten zien en kunt meewerken, mocht er naast je opdracht ruimte zijn. Niet alleen jouw kennis, ook jouw karakter telt! Zie jij jezelf in deze rol? We gaan graag een goed gesprek aan over jouw karaktereigenschappen, wensen en ambities. We zijn benieuwd naar jouw:

- communicatieve vaardigheden;
- resultaat- en kwaliteitsgerichtheid;
- drive en manier van samenwerken.

Onze toekomstige afstudeerstagelair(e) bevindt zich in de eindfase van de

studie Bedrijfskunde / Bedrijfseconomie en heeft affiniteit op het gebied van (Corporate) Finance.

Bedrijfsprofiel

Met 700 medewerkers en 24 vestigingen is de Jong & Laan het grootste zelfstandige accountantskantoor in het noorden, oosten en midden van Nederland. Onze Corporate Finance adviseurs begeleiden ondernemingen bij alle belangrijke mijlpalen. Van bedrijfsopvolgingen, fusies en aankopen tot het verkopen van bedrijven. Onlangs hebben wij de nummer 1 positie weten te bemachtigen in het MT1000 onderzoek in de categorie Corporate Finance!

Java/Oracle Software Developers

Impulse Info Systems

In the Development & Quality department, we are working on **USER**, our information system for mental healthcare, on a daily basis. As a developer, you are involved in the design of this application and you create solutions that support our clients in their daily work. Our objective is to unburden them as much as possible, so they can spend their time on offering good healthcare to their clients. You will work on our objectives in a Scrum team.

Some of your tasks

- Analysing how we can best implement user requirements
- Developing intuitive solutions
- Testing your own solutions and those of your colleagues

This is what we ask from you

Are you communicative, analytic, and flexible? Excellent! As far as we are concerned, you will also need guts, initiative and ambition to transform your ideas into intuitive software. Our objective is to provide our clients with the best possible application.

On top of that:

- you have a higher educational or university degree in the field of computer science
- you have experience with object-oriented programming
- you preferably know Java, Oracle ADF, PL/SQL, SQL
- you are aware of the latest software developments, and you can translate those to concrete solutions

- you are familiar with the agile approach

You versus us: our offer

We grow steadily. That is why new, experienced talent is very welcome at Impulse Info Systems. Our organisation is characterised by its horizontal structure, informal atmosphere and colourful staff. What does this challenge mean for you?

- Salary depends on knowledge and experience
- 38 leave days (on a fulltime basis)
- A challenging and dynamic work environment
- You can spend 10% of your time on trainings aimed at increasing your expertise
- Plenty of room for your own input and creativity

Embedded software developer

Figo, Enschede

—

Als embedded software developer werk jij aan de doorontwikkeling van onze Mobile Nodes. De Mobile Nodes integreren video, RFID, sensoren en 4G mobiele communicatie voor beveiligings- en veiligheidstoepassingen. Jouw rol is om nieuwe functies en features samen met je collega's uit te denken en te implementeren, en deze in de Mobile Nodes te implementeren, die zelfstandig in het veld opereren.

FIGO vraagt:

- Een afgeronde HBO/WO (BSc/MSc) opleiding
- Een passie voor software ontwikkeling
- Ervaring met C, C#, Java en SQL
- Ervaring met Linux is een pré
- Goede communicatieve vaardigheden
- Resultaatgerichte instelling

FIGO biedt:

- Een afwisselende baan met volop groei mogelijkheden. Kans om je eigen toekomst te creëren
- Onderscheidende innovatieve producten met interessante geavanceerde techniek
- End-to-end development
- Informele organisatie, met korte communicatielijnen
- Uitstekende werkomgeving
- Beloning gerelateerd aan de prestatie

Bedrijfsprofiel

FIGO is het R&D bedrijf voor BouWatch. FIGO/BouWatch is actief in innovatieve toepassingen waarin IoT, 4G/5G, video, RFID, sensoren en informatie van gebruikers real-time samenvloeden. De kern is videobewaking en toegangscontrole op afstand, met diverse verrijkingen voor beheer op afstand. Voor FIGO zijn daarom veiligheid, eenvoud en betrouwbaarheid kernbegrippen. FIGO is een compact team met grote impact. FIGO ontwikkelt eigen producten en systemen, met een sterke focus op systeem en software ontwikkeling. Daarnaast werkt FIGO ook veelvuldig samen in (inter)nationale projecten waardoor kennis en ervaring actueel en op een hoog niveau is en blijft.
