

How to exclude outdoor parcel lockers if you use API integration

Depending on the API you use, you can exclude outdoor parcel lockers from the list of available pickup locations or prevent parcels from being delivered to an outdoor parcel locker.

SmartPosti API

With the SmartPosti API, you can:

- Show only indoor parcel lockers: *filter=!outdoor*
- Show only outdoor parcel lockers: *filter=outdoor*
- If the *filter* parameter is omitted, all parcel locker types are displayed

Example (show all LV indoor parcel lockers):

/places?country=lv&filter=!outdoor

To prevent a parcel from being redirected to an outdoor parcel locker, use the following additional service:

Example (JSON):

```
"additionalServices": {  
  
  "temperaturesensitive": true  
  
}
```

Example (XML):

```
<additionalServices>  
  
  <temperaturesensitive>true</temperaturesensitive>  
  
</additionalServices>
```

Pickup Point API

To define whether outdoor parcel lockers are included in the API response, use:

"outdoorLocker": true → outdoor parcel lockers are included

"outdoorLocker": false → outdoor parcel lockers are excluded

```
{  
  "searchCriteria": {  
    "location": {  
      "postcode": "XXXXX",  
      "countryCode": "XX"
```

```
{  
  },  
  "serviceFilters": {  
    "outdoorLocker": false  
  }  
},  
"limit": 20  
}
```

Nextshipping API

To prevent a parcel from being redirected to an outdoor parcel locker, use the following additional service:

```
<Consignment.AdditionalService>  
  <AdditionalService.ServiceCode>3376</AdditionalService.ServiceCode>  
</Consignment.AdditionalService>
```

nShift API

To prevent a parcel from being redirected to an outdoor parcel locker, use:

```
"addons": [  
  {  
    "id": "NOBOX"  
  }  
]
```
