

## >> | ALEOS 4.3.6c Release Notes

ALEOS 4.3.6c applies to AirLink ES440 devices.

### New Features

#### Reliable Static Routing (RSR)

Added support for entering the Gateway IP address for Reliable Static Routing configurations. This is required for some 3rd party routers.

AVMS report changes (RSR Failover Status, MSCID 51006, is now reported to AVMS on change.)

### Bug Fixes

#### Reliable Static Routing (RSR)

Fixes a problem with RSR, where traffic was not going back to the primary route

Fixed a problem with the tracking object failing when set to ping an IP address that was two or more hops away from the AirLink device

### Known Issue

#### Reliable Static Routing (RSR)

When an operator manually disables the external router connected to the AirLink device's ethernet port, AVMS traffic may not reach the server or the AVMS traffic may travel over the wrong interface. This bug will be fixed in a subsequent release of ALEOS.
