Hilo Module references7

Introduction

This document contains the description of the packaging of the HiLo module.

Hilo Module Labels and Packaging

HiLo Module labels :

CIE LABEL with :

Bar code with serial number
 R : Manufacturing Reference > 253011094 (*)
 Reference CIE with revision of manufacture >253047036 F3 /
 Date code of product

FCC ID : VW3HILOC
 Date code (F-day number/year) level of manufacture > N6

IMEI number bar code
 IMEI nr / HiLo Part Number (**)
 351858020172644 / 263011073

(**) HiLo PN of the module alone

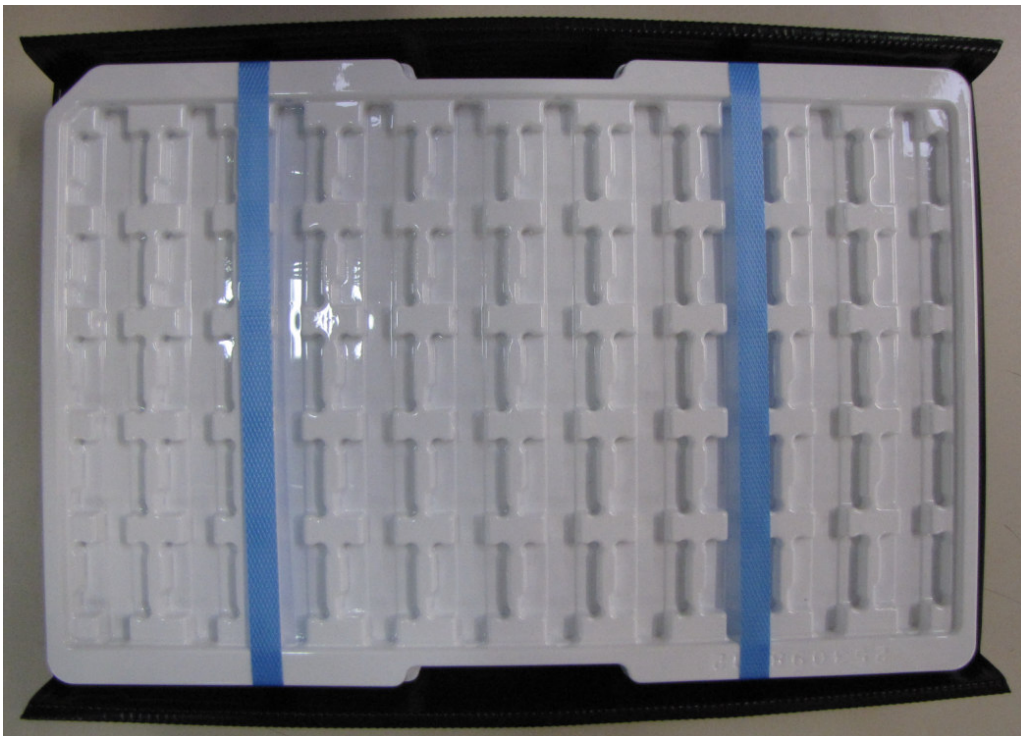

HiLo module packaging in trays of 50 positions :

The 500 modules are packed in 10 trays of 50 positions (1 tray for closing)

The 11 trays are surrounded by 2 positions (in blue)

The packing box is circled by 2 positions:

Label packing :

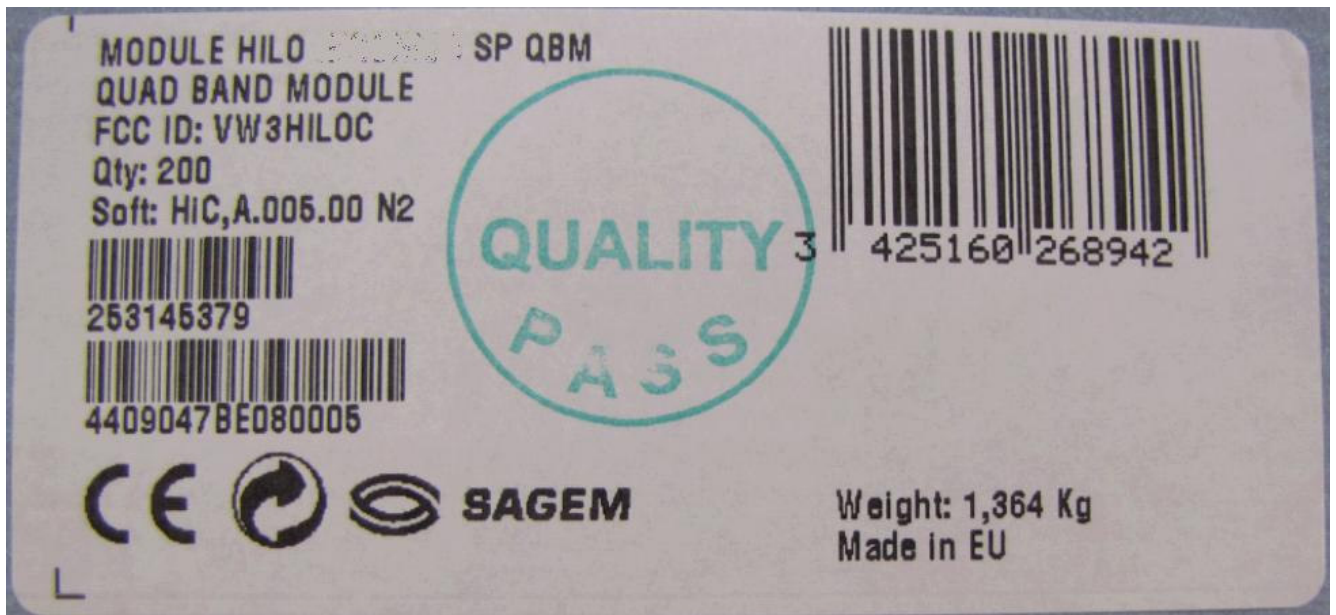

FCC ID :VW3HILOC

Qty of module in the packing (in below example 200, but usually 500)

HiLo software version = HIC, A.005.00 / level of manufacturing = N2

Bar code and HiLo Part Number of the module in a packing = 253145379 (***) in the example below, bar code with shipping quantity of HiLo Modules

The quality control of the products is marked by the stamp "QUALITY PASS"

Hilo Module references

Following our production process we have introduced several references or Part Numbers,

Here below we have summarized the 3 main phasis :

1. production of the Hilo modules without customized/generic software : the reference of the module is 253011094 and is common to all the HiLo modules, it can be read on one label of the module (*),
2. batch of production for a customer : a customized or generic software is downloaded into the modules ; HiLo module, as a single unit, has a reference which can be read on the second label of the module (**),
3. the modules are put on trays and packed : the HiLo module, in its packing, has a reference which can be read on the label of the black carton (***) ,

This 3rd reference (***) , is the one our customers shall indicate on their PO,

We also put this 3rd reference on the shipping documents and invoices,
