EVALUATION SUBJECT: HARDIE® SHINGLE PANELS, HARDIE® PLANK LAP SIDING, ARTISAN® LAP SIDING, AND HARDIE® SHINGLE INDIVIDUAL SHINGLES	
---	---	--	---

1.0 EVALUATION SCOPE

1.1 Compliance with the following codes:

- 2024, 2021, 2018, 2015, 2012 and 2009 [International Building Code® \(IBC\)](#)
- 2024, 2021, 2018, 2015, 2012 and 2009 [International Residential Code \(IRC\)](#)
- 2013 Abu Dhabi International Building Code (ADIBC)[†]

[†]The ADIBC is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

Properties evaluated:

- Weather protection
- Structural
- Types I, II, III, and IV (noncombustible) construction
- Fire-resistance-rated construction
- Thermal resistance

1.2 Evaluation to the following green standards:

- 2020, 2015, 2012 and 2008 ICC 700 [National Green Building Standard™](#) (ICC 700-2020, ICC 700-2015, ICC 700-2012 and ICC 700-2008)
- 2025 California Green Building Standard Code (CALGreen), Title 24, Part 11
- 2024, 2021 and 2018 [International Green Construction Code® \(IgCC\)](#)

- 2023, 2020 and 2017 ANSI/ASHRAE/USGBC Standard 189.1 – Standard for the Design of High-Performance Green Buildings, Except Low-Rise Buildings

Attributes verified:

See Section 2.0

2.0 USES

James Hardie fiber-cement panels, plank lap siding, and cladding shingles are used as exterior wall covering. The products comply with 2024 IBC Section 1403.9 [2021 and 2018 IBC Section 1403.10 (2015, 2012 and 2009 IBC Sections 1404.10)] and IRC Section R703.10. The products may be used on exterior walls required to be of Type I, II, III or IV construction (IBC).

The Hardie®Plank (Cemplank®, Prevail®, and RFC®) Lap Siding products may also used as soffit panels and comply with 2024 IBC Section 1412.4.

The attributes of the fiber-cement sidings have been verified as conforming to the provisions of (i) ICC 700-2020, ICC 700-2015 and ICC 700-2012 Sections 602.1.6 and 11.602.1.6 (termite-resistant materials); (ii) ICC 700-2008 Section 602.8 (termite-resistant materials); (iii) CALGreen Section A4.405.1.3 (prefinished materials) and A5.406.1.2 (reduced maintenance); (iv) ICC 700-2020 Sections 601.7 and 11.601.7 (prefinished materials); (v) ICC 700-2015 and ICC 700-2012 Sections 601.7, 11.601.7 and 12.1(A).601.7 (prefinished materials); (vi) ICC 700-2008 Section 601.7 (prefinished materials); (vii) ICC 700-2020 Sections 611.4.2 and 11.611.1.2 (Product Specific Declarations); (viii) ICC 700-2015 Sections 611.4.2 and 11.611.4.2 (Product Specific Declarations); (ix) 2024 IgCC Section 901.4.2 (Product Specific Declaration); (x) 2021 and 2018 IgCC Section 901.4.1.4.2 (Product Specific Declarations); (xi) 2015 IgCC Section 505.4.1 (Product Specific Declarations); (xii) 2023 ASHRAE 189.1 Section 9.4.2 (Product Specific Declaration); and (xiii) 2020 and 2017 ASHRAE 189.1 Section 9.4.1.4.2 (Product Specific Declarations). Note that decisions on compliance for those areas rest with the user of this report. The users are advised of the project-specific provisions that may be contingent upon meeting the specific condition, and the verification of those conditions is outside the scope of this report. These codes or standards often provide supplemental information as guidance.

Note: The Environmental Product Declaration (EPD) provided to ICC-ES was verified by a Program Operator other than ICC-ES. ICC-ES makes no claims or warranties regarding the contents of the EPD provided. Please contact the report holder to obtain a copy of the EPD and confirm its validity; see Section 7.0 for the report holder's contact information.

3.0 DESCRIPTION

3.1 General:

The exterior sidings are single-faced, cellulose fiber-reinforced cement (fiber-cement) products. Exterior sidings are identified as Hardie®Shingle panels, Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles. Nominal product dimensions are noted in [Table 1](#).

The products comply with ASTM C1186, as Grade II, Type A; are Class A rated with a flame-spread index of 0 and a smoke-developed index of less than 5 when tested in accordance with ASTM E84; and are classified as noncombustible when tested in accordance with ASTM E136. Thermal conductance (K) and resistance (R) values for the products are as shown in [Table 2](#) of this report, based on testing in accordance with ASTM C177.

3.2 Siding:

Hardie®Shingle panels, Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles are supplied either coated, or uncoated for subsequent application of a compatible exterior-grade top coat. Nominal product dimensions are noted in [Table 1](#).

The products are available in a variety of finish textures. Hardie®Shingle panels are offered in three configurations: half-round, staggered-edge, and square-edge. Hardie®Shingle individual shingles are offered in two configurations: staggered-edge and square-edge.

3.3 Fasteners:

Fastener type, size, spacing and installation method must be as shown in the tables of this report. Fasteners must be made from corrosion-resistant steel.

4.0 DESIGN AND INSTALLATION

4.1 Design:

The maximum basic wind speeds for positive or negative transverse load resistance of Hardie®Shingle panels, Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles are presented in [Tables 3](#) through [26](#) as follows:

Product	Installation Method	Table No.
Hardie®Shingle Panels	Over all frame types	Table 3
Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding	Over steel framing	Tables 4 through 7
	Over wood framing	Tables 8 through 13
	Over wood structural sheathing	Tables 14 through 16
	Over walls constructed of concrete masonry units complying with ASTM C90	Tables 18 through 23
Artisan® Lap Siding	Over wood framing	Table 17
	Over walls constructed of concrete masonry units complying with ASTM C90	Tables 18 through 23
Hardie®Shingle Individual Shingles	Over all frame types	Tables 24 through 26

4.2 Installation:

4.2.1 General: Installation must comply with this report, and a copy of this report must be available at all times on the jobsite during installation. All products may be cut to shape on-site by the score-and-snap method using a score-and-snap knife, a hand guillotine or a handsaw utilizing a carbide blade. A clear distance of 6 inches (152 mm) must be maintained between the siding and the earth. For installation above paved surfaces in areas designated as Hardie™ Zone 5 (HZ5®), a distance of not less than 2 inches (50.8 mm) must be maintained. For installation above paved surfaces in areas designated as Hardie™ Zone 10 (HZ10®), a distance of not less than 1 inch (25.4 mm) must be maintained. Unless otherwise noted in this report, the products must be installed in accordance with 2024 IBC Section 1404.17 [2021 and 2018 IBC Section 1404.16 (2015, 2012, and 2009 IBC Section 1405.16)] or 2024, 2021, 2018 and 2015 IRC Section R703.10 and Table R703.3 (2012 and 2009 IRC Section R703.10 and Table R703.4), as applicable. For all siding (panels, lap and shingle), a water-resistive barrier must be applied over the wood or metal framing members or nailable substrates in accordance with Section 1403.2 of the 2024, 2021 and 2018 IBC (Section 1404.2 of the 2015, 2012 and 2009 IBC) and Section R703.2 of the IRC, as applicable.

Siding may also be installed over exterior continuous foam insulation up to 4 inches (102 mm) thick complying with the *International Energy Conservation Code*® (IECC). Attachment must be in accordance with this report. For insulation thicknesses of 1⁵/₈ inches (41.3 mm) or less, the fastener length must be extended by the thickness of the exterior continuous insulation. For insulation thicknesses greater than 1⁵/₈ inches (41.3 mm), the siding must be attached to furring strips complying with the stud requirements in this report. Furring strip thickness must equal the net penetration of the fastener, and attachment of the furring strips to the wall framing must be designed to withstand the maximum wind speeds in this report. The foam insulation must be evaluated in an ICC-ES evaluation report in accordance with ICC-ES AC377 or ICC 1100 for use on exterior walls, and installation must be in accordance with the evaluation report and manufacturer's installation instructions.

4.2.2 Flashing: A 1/8-inch (3.2 mm) gap must be left at locations where the siding butts against door, window or corner trim. Such butt-to installation gaps must be flashed or caulked in accordance with the applicable code. Vertical joints must occur over nailable substrates. Horizontal joints must be flashed with metal Z-flashing and occur over the solid blocking or wood structural panel sheathing.

4.2.3 Hardie®Shingle Panels: The shingle panels require the use of a starter strip to set the first course on the proper angle and to create a drip edge. The panels must be fastened in accordance with the provisions of [Table 3](#) of this report.

4.2.4 Hardie®Plank (Cemplank®, Prevail®, and RFC®) Lap Siding: The lap siding must be fastened either through the overlapping planks (face nailed) or through the top edge of single planks (blind nailed) in accordance with the provisions of [Tables 4](#) through [16](#) of this report. Lap siding installed over walls constructed of concrete masonry units complying with ASTM C90 must be applied in accordance with [Tables 18](#) through [23](#). The lap siding requires the use of a starter strip to set the first course on the proper angle and to create a drip edge.

Vertical joints must occur over studs, except where the "off-stud splice device" is installed or where the planks are installed to wood structural panel sheathing complying with the applicable code, and must be staggered

on subsequent courses. Where the “off-stud splice device” is installed, the splice device’s bottom lip must be placed over the adjacent solid course of planks. The plank must then be fastened to the framing with corrosion-resistant fasteners. The abutting plank must be positioned and fastened into place ensuring that the lower edges of the two planks align. The metal device must be located centrally over the vertical joint.

Vertical joints between planks must be lightly butted or gapped and must be protected by one of the following methods: (a) sealed with caulking in accordance with the caulk manufacturer’s published gapping requirements and caulking application instructions; or (b) covered with an H-section joint cover; or (c) located over a strip of non-perforated flashing complying with ASTM D226, Type I felt, or other approved flashing in accordance with IBC Section 1402.2 or IRC Section R703.1, as applicable. Trim and corners must be installed, and the siding must be finished in accordance with the manufacturer’s application instructions. When used as soffit panels, installation of the lap siding must be in accordance with 2024 IBC Section 1412.4 or 2024 IRC Section R704, as applicable.

4.2.5 Artisan[®] Lap Siding: When installation is on wood framing members, metal framing members, or wood structural sheathing, the lap siding must be fastened through the top edge of single planks (blind nailed) in accordance with the provisions of [Table 17](#) of this report. Lap siding installed over walls constructed of concrete masonry units complying with ASTM C90 must be applied in accordance with [Tables 18](#) through [23](#). The lap siding requires the use of a starter strip to set the first course on the proper angle and to create a drip edge.

Vertical joints must be made off-stud. Joints may be located centrally between studs but no closer than 4 inches (102 mm) from the edge of a stud. Nails must not be placed within 1 inch (25.4 mm) of the end of the planks. Vertical joints must be staggered on subsequent courses. The plank must then be fastened to the framing with corrosion-resistant fasteners.

Vertical joints between planks must be lightly butted and must be located over a strip of non-perforated flashing complying with ASTM D226, Type I felt, or other approved flashing in accordance with IBC Section 1402.2 or IRC Section R703.1, as applicable. Trim and corners must be installed, and the siding must be finished in accordance with the manufacturer’s application instructions..

4.2.6 Hardie[®] Shingle Individual Shingles: When installed on wood structural panel sheathing, the cladding shingles are fastened in accordance with the provisions of either [Table 24](#), [25](#), or [26](#) of this report.

The individual shingles require the use of a starter strip to set the first course on the proper angle and to create a drip edge. The nominally 1¹/₄-inch-wide-by-¹/₄-inch-thick starter strip and a minimum 8¹/₄-inch-wide (210 mm) Hardie[®]Plank (Cemplank[®], Prevail[®], and RFC[®]) lap siding starter course are installed over the water-resistive barrier with the bottom of the starter strip and starter course even with the bottom of the bottom plate. Shingles are spaced a maximum of ¹/₄ inch (6.4 mm) apart, leaving a minimum side lap of 1¹/₂ inches (38 mm) between the joints of successive courses. Fasteners must be spaced a minimum of ³/₄ inch (19 mm) and a maximum of 1 inch (25.4 mm) from shingle edges and must be positioned to be covered a nominal 1¹/₄ inches by the succeeding shingle course; for 12-inch-wide (305 mm) shingles, the third nail (see [Table 26](#)) must be installed mid-span of the shingle. Nails must secure shingles but must not be over-driven. Trim and corners must be installed, and the shingles must be finished in accordance with the manufacturer’s application instructions.

4.3 Fire-resistance-rated Wall Assembly (Hardie[®]Plank (Cemplank[®], Prevail[®], and RFC[®]) Lap Siding):

The asymmetrical, load-bearing, one-hour fire-resistance-rated wall assembly must consist of nominally 2-by-4 wood studs spaced a maximum of 24 inches (610 mm) on center, with two top plates and a single bottom plate. One layer of ⁵/₈-inch-thick (15.9 mm), Type X, gypsum wallboard complying with ASTM C36 or ASTM C1396, 48 inches (1219 mm) wide, must be applied vertically to the interior face of the studs and secured with minimum 1³/₄-inch-long (44 mm) cup-head gypsum wallboard nails, spaced 7 inches (178 mm) on center at board edges and intermediate framing members. All board joints must be backed by framing. The ⁵/₈-inch-thick (15.9 mm), Type X, gypsum wallboard joints and nail heads must be finished in accordance with ASTM C840 or GA216. The exterior face of the wall must be covered with one layer of ¹/₂-inch-thick (12.7 mm), Type X, water-resistant core treated gypsum sheathing complying with ASTM C36 or ASTM C1396 and one layer of maximum 12-inch-wide (305 mm) Hardie[®]Plank (Cemplank[®], Prevail[®], and RFC[®]) lap siding lapped a minimum of 1¹/₄ inches (32 mm). The ¹/₂-inch-thick (12.7 mm), Type X, water-resistant core-treated gypsum sheathing must be applied vertically to the exterior side of the framing members with vertical edges staggered 24 inches (610 mm) from the joints on the opposite side. All board joints must be backed by framing. The ¹/₂-inch-thick (12.7 mm), Type X, water-resistant core-treated gypsum sheathing must be fastened to the framing members with 1³/₄-inch-long (44 mm) roofing nails spaced 7 inches (178 mm) on center in the field and 4 inches (102 mm) on center along the perimeter of each board. The outer layer of ⁵/₁₆-inch-thick (7.5 mm), maximum 12-inch-wide (305 mm) Hardie[®]Plank (Cemplank[®], Prevail[®], and RFC[®]) lap siding must be applied over the ¹/₂-inch-thick (12.7 mm), Type X, water-resistant core-treated gypsum sheathing by attaching minimum

1 1/4-inch-wide (31.8 mm) Hardie®Plank (Cemplank®, Prevail®, and RFC®) starter strips through the gypsum sheathing into the bottom plate and the 12-inch-wide (305 mm) Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding applied horizontally with a minimum nominally 1 1/4-inch head lap, and fastening with a single 6d corrosion-resistant common nail driven through the lapped planks into each stud.

The axial load must be the lesser of the following, provided structural consideration for axial, flexural and bearing perpendicular-to-grain stresses is in accordance with ANSI/AWC NDS-2024 for the 2024 IBC and IRC; ANSI/AWC NDS-2018 for the 2021, 2018 IBC and IRC; ANSI/AWC NDS-2015 for the 2015 IBC and IRC; ANSI/AF&PA NDS-2010 for the 2012 IBC or IRC (-2005 for the 2009 IBC or IRC):

1. Maximum 100 percent of full allowable axial compressive design load permitted for the wood species.
2. Maximum allowable wood axial stress of $0.78 F'_c$, which must not exceed $0.78 F'_c$ at a slenderness ratio l_e/d of 33.

5.0 CONDITIONS OF USE:

The Hardie®Shingle panels, Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- 5.1 James Hardie® Building Products, Inc, products listed in this report must be installed in accordance with this report and the manufacturer's published installation instructions. In the event of a conflict between this report and the manufacturer's instructions, this report governs.
- 5.2 Hardie®Shingle panels, Hardie®Plank (Cemplank®, Prevail®, and RFC®) lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles must be installed on exterior walls braced in accordance the applicable code.
- 5.3 Design wind speeds applied to James Hardie® sidings described in this report must be determined in accordance with the applicable code and must be less than those shown in the wind speed tables in this report.
- 5.4 The sidings must be installed over a code-complying water-resistive barrier and as noted in this report.
- 5.5 For use in fire-resistance-rated construction, installation must be in accordance with Section 4.3.
- 5.6 Flashing must be installed at all penetrations and terminations in accordance with the applicable code.
- 5.7 Under 2024 IBC Section 1402.6 [2021 and 2018 IBC Section 1402.5 (2015 or 2012 IBC Section 1403.5)], where a combustible water-resistive barrier is used, installation on exterior walls of buildings of Type I, II, III, and IV construction is limited to buildings that are not greater than 40 feet in height above grade plane, except as permitted under Exception 2 of the 2024 IBC Section 1402.6 [2021 and 2018 IBC Section 1402.5 (2015 IBC Section 1403.5)].
- 5.8 The products are manufactured at the following locations, with quality control inspections by ICC-ES:
 - Cleburne, Texas
 - Peru, Illinois
 - Plant City, Florida
 - Prattville, Alabama
 - Pulaski, Virginia
 - Sparks, Nevada
 - Tacoma, Washington
 - Waxahachie, Texas
 - Fontana, California
 - Summerville, South Carolina

6.0 EVIDENCE SUBMITTED

Data in accordance with the [ICC-ES Acceptance Criteria for Fiber Cement Siding Used as Exterior Wall Siding \(AC90\)](#), dated October 2020 (editorially revised June 2024).

7.0 IDENTIFICATION

- 7.1 Pallets of the James Hardie[®] Building Products, Inc., Hardie[®]Shingle panels, Hardie[®]Plank (Cemplank[®], Prevail[®], and RFC[®]) lap siding, Artisan[®] Lap Siding, and Hardie[®]Shingle shingles must carry a label bearing the manufacturer's name and telephone number, the product name, the name of the inspection agency, ICC-ES, and the evaluation report number (ESR-2290).

For SI: 1 foot = 305 mm, 1 inch = 25.4 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.40 or greater.

²For application to metal framing members, fasteners must be ET & F Fastening Systems, Inc. ET&F Panelfast[®] nail, ET & F No. AGS-100-0150, head diameter = 0.313 in., shank diameter = 0.100 in., length = 1.5 in. Metal studs must be minimum Fy = 33 ksi.

³For application to ASTM C90 concrete masonry unit wall, fasteners must be either ET & F Fastening Systems, Inc. ET&F block nail (ET & F No. ASM-144-0125, head dia. = 0.30 in., shank dia. = 0.14 in., length = 1.25 in.), Max System block nail (CP-C 832 W7-ICC, head diameter = 0.30 in., shank diameter = 0.15 in., length = 1.3 in.), Aerosmith SurePin block nail (head diameter = 0.30 in., shank diameter = 0.144 in., length = 1.25 in.), or Jaaco Nail Pro (NP145S head diameter = 0.30 in., shank diameter = 0.145 in., length = 1.25 in.) applied at the equivalent fastener or stud spacing.

⁴Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: I = 1.0, K_{zt} = 1, K_d = 0.85, GC_{pi} = 0.18, GC_p = -1.4.

⁵For application to wood framing or wood-based sheathing, the minimum fastener penetration must be 1 inch into framing or the sheathing thickness as applicable.

⁶V_{asd} = nominal design wind speed.

⁷V_{ult} = ultimate design wind speed.

⁸Wind speed design assumptions per Section 30.4, of ASCE 7-10: K_{zt} = 1, K_d = 0.85, GC_{pi} = 0.18, GC_p = -1.4.

⁹2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, V_{asd} = V_{ult} √0.6

¹⁰V = basic design wind speed

¹¹Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: K_{zt} = 1, K_d = 0.85, GC_{pi} = 0.18, GC_p = -1.4.

¹²2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, V_{asd} = V √0.6

¹³Smooth-shank stainless steel nails are outside of the scope of this report.

For SI: 1 inch = 25.4 mm, 1 foot = 305 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.42 or greater, unless otherwise noted.

²Face = Fastened through the overlapping plank. Blind = Fastened through the top edge of single plank.

³Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: $I = 1.0$, $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

⁴ET&F pin fasteners have knurled shanks.

⁵Fastener length shall be sufficient to penetrate back side of the minimum 7/16" WSP sheathing by at least 1/4" for nails or 3 full threads for screws.

⁶Values are for species of wood having a specific gravity of 0.50 or greater.

⁷Values are for species of wood having a specific gravity of 0.40 or greater.

⁸Metal studs must be minimum $F_y = 33$ ksi.

⁹ V_{asd} = nominal design wind speed.

¹⁰ V_{ult} = ultimate design wind speed.

¹¹Wind speed design assumptions per Section 30.4, of ASCE 7-10: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹²2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V_{ult} \sqrt{0.6}$

¹³ V = basic design wind speed

¹⁴Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹⁵2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V \sqrt{0.6}$

For SI: 1 inch = 25.4 mm, 1 foot = 305 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.42 or greater, unless otherwise noted.

²Face = Fastened through the overlapping plank. Blind = Fastened through the top edge of single plank.

³Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: $I = 1.0$, $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

⁴ET&F pin fasteners have knurled shanks.

⁵Fastener length shall be sufficient to penetrate back side of the minimum 7/16" WSP sheathing by at least $\frac{1}{4}$ " for nails or 3 full threads for screws.

⁶Values are for species of wood having a specific gravity of 0.50 or greater.

⁷Values are for species of wood having a specific gravity of 0.40 or greater.

⁸Metal studs must be minimum $F_y = 33$ ksi.

⁹ V_{asd} = nominal design wind speed.

¹⁰ V_{ult} = ultimate design wind speed.

¹¹Wind speed design assumptions per Section 30.4, of ASCE 7-10: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹²2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V_{ult} \sqrt{0.6}$

¹³ V = basic design wind speed

¹⁴Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹⁵2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V \sqrt{0.6}$

¹⁶Smooth-shank stainless steel nails are outside of the scope of this report.

							20	114	101	92	148	130	119
							40	110	94	87	142	121	112
							60	104	90	-	134	116	-

For SI: 1 inch = 25.4 mm, 1 foot = 305 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.42 or greater, unless otherwise noted.

²Face = Fastened through the overlapping plank. Blind = Fastened through the top edge of single plank.

³Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: $I = 1.0$, $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

⁴ET&F pin fasteners have knurled shanks.

⁵Fastener length shall be sufficient to penetrate back side of the minimum 7/16" WSP sheathing by at least 1/4" for nails or 3 full threads for screws.

⁶Values are for species of wood having a specific gravity of 0.50 or greater.

⁷Values are for species of wood having a specific gravity of 0.40 or greater.

⁸Metal studs must be minimum $F_y = 33$ ksi.

⁹ V_{asd} = nominal design wind speed.

¹⁰ V_{ult} = ultimate design wind speed.

¹¹Wind speed design assumptions per Section 30.4, of ASCE 7-10: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹²2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V_{ult} \sqrt{0.6}$

¹³ V = basic design wind speed

¹⁴Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹⁵2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V \sqrt{0.6}$

¹⁶Smooth-shank stainless steel nails are outside of the scope of this report.

For **SI**: 1 inch = 25.4 mm, 1 foot = 305 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.42 or greater, unless otherwise noted.

²Face = Fastened through the overlapping plank. Blind = Fastened through the top edge of single plank.

³Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: $I = 1.0$, $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

⁴ET&F pin fasteners have knurled shanks.

⁵Fastener length shall be sufficient to penetrate back side of the minimum 7/16" WSP sheathing by at least 1/4" for nails or 3 full threads for screws.

⁶Values are for species of wood having a specific gravity of 0.50 or greater.

⁷Values are for species of wood having a specific gravity of 0.40 or greater.

⁸Metal studs must be minimum $F_y = 33$ ksi.

⁹ V_{asd} = nominal design wind speed.

¹⁰ V_{ult} = ultimate design wind speed.

¹¹Wind speed design assumptions per Section 30.4, of ASCE 7-10: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹²2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V_{ult} \sqrt{0.6}$

¹³ V = basic design wind speed

¹⁴Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹⁵2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V \sqrt{0.6}$

¹⁶Smooth-shank stainless steel nails are outside of the scope of this report.

TABLE 15—MAXIMUM WIND SPEEDS FOR EXPOSURE CATEGORY (mph) FOR HARDIE® PLANK ON 7/16" WOOD STRUCTURAL PANEL SHEATHING ONLY USING RING SHANK NAIL (cont.)

							2012 IRC, 2009 IBC/IRC, 2006 IBC/IRC (Basic Wind Speed, $V_{asd}^{3,9,12,15}$)			2015 IBC/IRC and 2012 IBC (Ultimate Design Wind Speed, $V_{ult}^{10,11}$), 2021 and 2018 IBC/IRC (Basic Design Wind Speed, $V^{13,14}$)			
PRODUCT	PRODUCT DIMENSION (IN.)		FASTENER TYPE ^{4,16}	FASTENING METHOD ²	FRAME TYPE ^{1,8}	STUD SPACING (IN.)	BUILDING HEIGHT (FT.)	EXPOSURE CATEGORY			EXPOSURE CATEGORY		
	THICK.	WIDTH						B	C	D	B	C	D
Hardie®Plank	5/16	≤ 9 1/2	0.120" shank, 0.375" HD, 1.25" long ring shank nail ⁵	blind nail through top edge of plank at 12 in. on center	Attached to 7/16" wood structural panel sheathing only	7/16" WSP attached per code	0-15	106	96	87	136	124	112
							20	106	93	-	136	120	-
							40	101	87	-	131	112	-
							60	96	-	-	124	-	-

For SI: 1 inch = 25.4 mm, 1 foot = 305 mm, 1 mph = 0.44 m/s.

¹Values are for species of wood having a specific gravity of 0.42 or greater, unless otherwise noted.

²Face = Fastened through the overlapping plank. Blind = Fastened through the top edge of single plank.

³Wind speed design assumptions per Section 6.5, Method 2, of ASCE 7-05: $I = 1.0$, $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

⁴ET&F pin fasteners have knurled shanks.

⁵Fastener length shall be sufficient to penetrate back side of the minimum 7/16" WSP sheathing by at least 1/4" for nails or 3 full threads for screws.

⁶Values are for species of wood having a specific gravity of 0.50 or greater.

⁷Values are for species of wood having a specific gravity of 0.40 or greater.

⁸Metal studs must be minimum $F_y = 33$ ksi.

⁹ V_{asd} = nominal design wind speed.

¹⁰ V_{ult} = ultimate design wind speed.

¹¹Wind speed design assumptions per Section 30.4, of ASCE 7-10: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹²2015 and 2012 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V_{ult} \sqrt{0.6}$

¹³ V = basic design wind speed

¹⁴Wind speed design assumptions per Section 30.3, of ASCE 7-16 and ASCE 7-22: $K_{zt} = 1$, $K_d = 0.85$, $GC_{pi} = 0.18$, $GC_p = -1.4$.

¹⁵2024 IBC Section 1609.3.1, Eqn. 16-18, 2021 IBC Section 1609.3.1, Eqn. 16-17 and 2018 IBC Section 1609.3.1, Eqn. 16-33, $V_{asd} = V \sqrt{0.6}$

¹⁶Smooth-shank stainless steel nails are outside of the scope of this report.

JAMES HARDIE BUILDING PRODUCTS, INC.

EVALUATION SUBJECT:

HARDIE®SHINGLE PANELS, HARDIE®PLANK LAP SIDING, ARTISAN® LAP SIDING, AND HARDIE®SHINGLE INDIVIDUAL SHINGLES

1.0 REPORT PURPOSE AND SCOPE**Purpose:**

The purpose of this evaluation report supplement is to indicate that the Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles, described in ICC-ES evaluation report [ESR-2290](#), have also been evaluated for compliance with the codes noted below:

Applicable code editions:

- 2024, 2021, 2018, 2015, 2012 and 2009 *International Wildland-Urban Interface Code* (IWUIC)

2.0 CONCLUSIONS

The Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles, described in Sections 2.0 through 7.0 of the evaluation report [ESR-2290](#), comply as noncombustible materials in accordance with 2024 IWUIC Section 503.2.1 (2021, 2018, 2015, 2012, and 2009 IWUIC Section 503.2, Item 2). These products may be used in the design and construction, alteration, or repair of buildings located in any Fire Hazard Severity Zone under the *International Wildland-Urban Interface Code* (IWUIC). The design and installation are in accordance with the *International Wildland-Urban Interface Code* (IWUIC) and the *International Building Code*® (IBC) provisions noted in the evaluation report as applicable.

This supplement expires concurrently with the evaluation report [ESR-2290](#), reissued March 2026 and revised April 2026.

EVALUATION SUBJECT:

HARDIE®SHINGLE PANELS, HARDIE®PLANK LAP SIDING, ARTISAN® LAP SIDING, AND HARDIE®SHINGLE INDIVIDUAL SHINGLES

1.0 REPORT PURPOSE AND SCOPE**Purpose:**

The purpose of this evaluation report supplement is to indicate that Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles, described in ICC-ES evaluation report [ESR-2290](#), have also been evaluated for compliance with the codes noted below.

Applicable code editions:

- 2025 California Building Code® (CBC)

For evaluation of applicable chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) AKA: California Department of Health Care Access and Information (HCAI) and Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.

- 2025 California Residential Code® (CRC)

2.0 CONCLUSIONS**2.1 CBC:**

The Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles described in Sections 2.0 through 7.0 of the evaluation report [ESR-2290](#), comply with CBC Chapter 14, provided the design and installation are in accordance with the 2024 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements of CBC Chapters 16 and 17, as applicable.

The Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles have been evaluated under the 2025 CA Wildland-Urban Interface Code Section 503.2.1 (as referenced in the 2025 CBC Chapter 7A) as an ignition-resistant building material.

2.1.1 OSHPD: The applicable OSHPD Sections and Chapters of the CBC are beyond the scope of this supplement.

2.1.2 DSA: The applicable DSA Sections and Chapters of the CBC are beyond the scope of this supplement.

2.2 CRC:

The Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles, described in Sections 2.0 through 7.0 of the evaluation report [ESR-2290](#), comply with CRC Chapter 7, provided the design and installation are in accordance with the 2024 *International Residential Code*® (IRC) provisions noted in the evaluation report.

The Hardie®Shingle panels, Hardie®Plank lap siding, Artisan® Lap Siding, and Hardie®Shingle individual shingles have been evaluated under the 2025 CA Wildland-Urban Interface Code Section 503.2.1 (as referenced in the 2025 CRC Section R337) as an ignition-resistant building material.

This supplement expires concurrently with the evaluation report, reissued March 2026 and revised April 2026.

JAMES HARDIE BUILDING PRODUCTS, INC.

EVALUATION SUBJECT:

HARDIE®SHINGLE PANELS, HARDIE®PLANK LAP SIDING, ARTISAN® LAP SIDING, AND HARDIE®SHINGLE INDIVIDUAL SHINGLES

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Hardie®Shingle Panels, Hardie®Plank Lap Siding, Artisan® Lap Siding, and Hardie®Shingle Individual Shingles, recognized in ICC-ES evaluation report [ESR-2290](#), has also been evaluated for compliance with the codes noted below.

Applicable code editions:

- 2023 *Florida Building Code—Building*
- 2023 *Florida Building Code—Residential*

2.0 CONCLUSIONS

The Hardie®Shingle Panels, Hardie®Plank (Cemplank® and Prevail®) Lap Siding, Artisan® Lap Siding, and Hardie®Shingle Individual Shingles, described in Sections 2.0 through 7.0 of ICC-ES evaluation report [ESR-2290](#), complies with the *Florida Building Code-Building* and the *Florida Building Code-Residential*. The design requirements must be determined in accordance with the *Florida Building Code-Building* or the *Florida Building Code-Residential*, as applicable. The installation requirements noted in ICC-ES evaluation report [ESR-2290](#) for the 2021 *International Building Code*® meet the requirements of the *Florida Building Code-Building* or the *Florida Building Code-Residential*, as applicable, with the following conditions:

- Design wind loads must be based on Section 1609 of the *Florida Building Code-Building* or Section R301.2.1.1 of the *Florida Building Code-Residential*, as applicable.
- Load Combinations must be in accordance with Section 1605.2 if Section 1605.3 of the *Florida Building Code-Building*, as applicable.
- Installation must meet requirements of Section 1403.8 of the *Florida Building Code – Building* and Section R318.7 of the *Florida Building Code – Residential*, as applicable.
- Water-resistive barrier must be in accordance with Section 1404.2 of the *Florida Building Code-Building* or Section R703.2 of the *Florida Building Code-Residential*, as applicable.
- Flashing must be in accordance with Section 1405.4 of the *Florida Building Code-Building* or Section R703.4 of the *Florida Building Code-Residential*, as applicable.

Use of the Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding have also been found to be in compliance with the High-Velocity Hurricane Zone provisions of the *Florida Building Code-Building* and the *Florida Building Code-Residential* with the following conditions:

- The allowable negative design wind load of Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding must not exceed 92 psf (4405 Pa).

- Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding must be installed on assemblies complying with *Florida Building Code—Building* Section 1626.4 or 2322.3, or on minimum 5/8-inch-thick solid plywood structural sheathing complying with DOC PS-1 installed as follows:
 - 5/8-inch-thick solid plywood structural sheathing shall be attached to wood studs in accordance with *Florida Building Code—Building* Section 2322.3. The wood studs must have a minimum specific gravity of 0.42.
 - 5/8-inch-thick solid plywood structural sheathing shall be attached to metal studs spaced at 6-inches (152 mm) on-center. At panel edges and all intermediate supports using a No. 8-18 1-1/4-inch (31.75 mm) long by 0.315-inch (8 mm) head diameter ribbed bugle head screw. The metal studs must have a minimum thickness of 0.033-inch (0.838 mm), web depth of 3-5/8-inch (92.1 mm), and flange size 1-5/8-inch (41.3 mm).
 - Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding shall be applied horizontally commencing from the bottom course of the wall with 1-1/4-inch-wide (31.75 mm) laps at the top of the plank such that the exposure area of each plank is less than or equal to 8-1/4-inch (210 mm) vertically.
 - When installed over wood framing, Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding must be fastened to sheathing over wood studs with a minimum 2-1/2-inch (63.5 mm) long by 0.223-inch (5.66 mm) shank diameter corrosion-resistant siding nails.
 - When installed over steel framing, Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding must be fastened to sheathing over metal studs with a minimum No. 8-18 by 2-1/4-inch (57.15 mm) by 0.315-inch (8 mm) bugle head screws.
 - Fasteners are spaced 16 inches (406 mm) on-center and less than or equal to 8-1/4-inch (210 mm) vertically on the studs.
 - Fasteners shall have a minimum edge distance of 3/8-inch (9.53 mm).
 - Maximum support/span spacing shall be no more than 16 inches (406 mm) on-center.

In addition to the data noted in Section 6.0 of the evaluation report [ESR-2290](#), data in accordance with *Florida Building Code* Test Protocols for High-Velocity Zones TAS 202 and TAS 203 was submitted for Hardie®Plank (Cemplank® and Prevail®) Lap Siding and Artisan® Lap Siding.

Use of the Hardie®Shingle Panels and Hardie®Shingle Individual Shingles for compliance with the High-Velocity Hurricane Zone provisions of the *Florida Building Code—Building* and the *Florida Building Code—Residential* has not been evaluated and is outside the scope of this supplemental report.

For products falling under Florida Rule 61G20-3, verification that the report holder's quality assurance program is audited by a quality assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official when the report holder does not possess an approval by the Commission). Florida Rule 61G20-3 is applicable to products and/or systems which comprise the building envelope and structural frame for compliance with the structural requirements of the Florida Building Code.

This supplement expires concurrently with the evaluation report, reissued March 2024 and revised April 2026.
