1. Maximum service temperatures listed are intended as general guidelines for Ductile iron pipe gaskets. For service temperatures greater than those listed, consult pipe manufacturer for specific recommendations.

2. Maximum service temperature is not usually a meaningful parameter for piping gaskets; however, low temperatures during pipeline installation may necessitate precautions. Consult pipe manufacturer for pertinent recommendations.

3. Water, including sewage, with low levels of the listed contaminants.

4. Lubricating oil in the air will adversely affect SBR and EPDM performance.

5. SBR, Nitrile, or Neoprene are not recommended for air exposure in wastewater treatment systems.

6. Consult pipe manufacturer for availability of FKM push-on gaskets.

7 Maximum service temperatures listed are intended as general guidelines which may vary depending on service conditions and lining formulation. Consult pipe manufacturer for specific recommendations.

8 ASTM C150 Type V sulfate resisting cement is recommended for seawater applications and some reclaimed water applications. Consult pipe manufacturer for specific reclaimed water recommendations.

9 Other linings may be available for particular conditions. Consult pipe manufacturer for specific service use and material details.

10 Recommended lining thicknesses may vary depending on service conditions, epoxy formulation, diameter, and other variables. Consult fitting manufacturer for specific recommendations.
