

Universal Checkout

Higher approval rates, enhanced security, and an improved customer experience

Universal Checkout is a flexible checkout page that connects to all of your gateways, payment service providers (PSPs), and third party APIs. This universal front door to your payments ecosystem provides a brandable, customizable, and consistent interface across all browsers and devices.

Create a Secure, Branded, and Seamless Checkout Experience in Under an Hour

A bespoke checkout experience across devices and browsers

Accept more payment methods as your business evolves

The first step to optimizing a payments ecosystem

Flexibility and Simplicity

- ✓ Customize your own Universal Checkout experience with VGS Checkout.js and Mobile SDKs or use a VGS-hosted drop-in solution to save time and developer bandwidth
- ✓ Universal Checkout's front end integrates with over 120 PSPs, gateways, and third party APIs with more being included every week
- ✓ Integrate seamlessly to the VGS Proxy and VGS Vault data security solutions as well as the full suite of Payment Optimization features

A Universal Front Door

Universal Checkout scales as your application grows, making it easy to add additional functionality while maintaining a consistent, branded customer experience.

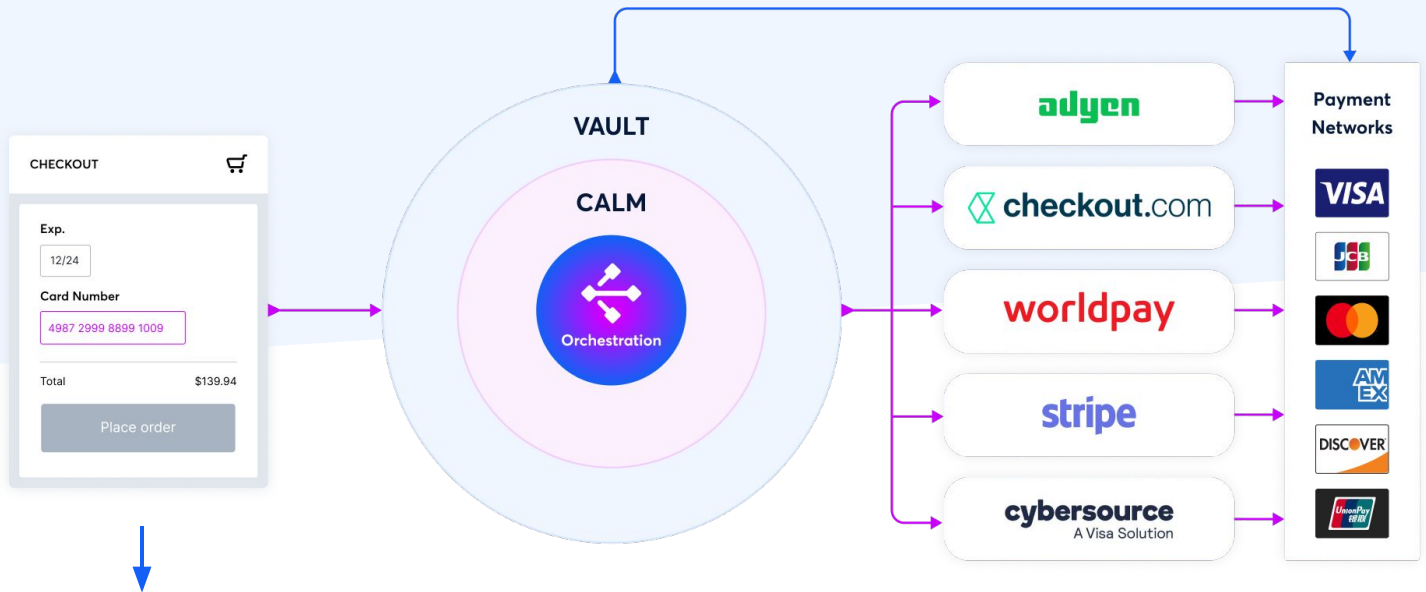

Your Business, Your Checkout Page

Your payments ecosystem is uniquely yours – your checkout experience should be too. VGS designed Universal Checkout to liberate businesses from single-payment-provider design and functionality limitations.

The Universal Checkout page will handle validation, formatting, and responsive appearance of the hosted page.

It accepts all major payment methods, including digital wallets, all within a 3DS & 3DS2 supported environment.

The First Step to Payment Optimization

Universal Checkout

Universal Checkout is the first stage of the VGS Payment Optimization product suite. It brands and abstracts the checkout experience, affording merchants and SaaS providers greater control while maximizing accepted payment methods.

Payment Optimization

Optimize Acceptance

Accept more payment methods as your business grows horizontally, vertically, or globally.

Optimize Approvals

Minimize card declines, especially false positives, so you can reduce or eliminate lost revenue and cart abandonment due to stale card information.

Optimize Costs

Route transactions among different gateways and PSPs tactically and strategically to reduce transaction costs and build redundancy in case of an unresponsive endpoint.
