**Offloading PII Data Privacy And Protection**

**Summary:**

Very Good Security (VGS) enables organizations to focus on their core business by offloading their data protection and compliance complexity.

**Challenges Securing PII Data**

- Offloading PII Data Privac y and Protection
- Secure PII Collection And Alias ing
- Reduce PII Data Compliance Complexity
- PII Data Protection Highlights

**Offloading PII Data Privac y and Protection**

“PII can be very sensitive and often contains personally identifiable information. VGS offers an easy way to offload data protection and compliance (GDPR, CCPA, GLBA) to third-party companies securely.”

**Secure PII Collection And Aliasing**

Many customer interactions through web forms carry some risks posed when a customer provides their home address. It is possible to minimize these risks by replacing PII with aliases, for instance, when a customer provides their home address in a customer service request. VGSusuarios can automatically replace PII with aliases and ensure the value of their PII without the associated risks.

**Reduce PII Data Compliance Complexity**

By automating compliance and reducing the complexity of manual tasks, VGS helps customers understand their privacy and protection standards, ensuring compliance and reducing regulatory risk.

**PII Data Protection Highlights**

- Secure PII Collection
- Reduce PII Data Compliance Complexity
- PII Data Protection
- For more information about VGS, please visit our website or contact us directly.

**VGS Zero Data Platform**

VGS Zero Data Platform allows customers to store, use, and protect PII, while fully being HIPAA compliant.
