

# VGS Control for SOC 2

The fastest and most secure way to achieve SOC 2 and secure your data.

VGS has simplified the SOC 2 process into only 117 total tasks across 50 controls, and mapped those controls to the 5 trust principles for SOC 2—reducing your workload by up to 94%.

# Features

**Automated Evidence Collection** 

**Active Security Monitoring** 

**Automated Vendor Management** 

**Dynamic Policy Builder** 

**Customizable Control Collections** 

Automated Risk Management

IT Asset Management

Real-time Auditor Coordination

## Benefits

## Speed up your Compliance

Accelerates audit readiness by up to 70%; so you're ready in weeks, not months.

#### **Reduce Costs and Errors**

No more manual spreadsheets, checklists, mass exports and email strings with auditors.

#### **Unlock More Business**

Build trust with your customers by demonstrating that security is a priority.

#### **Reduce Team** Workloads

Prescriptive tasks and remediation reduce engineering workloads upwards of 94%.

### **Eliminate** Redundancies

Eliminates the need to use another GRC Tool or mass export files.

## **Continuous Security Monitoring**

24/7 active compliance monitoring keeps you compliant on an ongoing basis.

## **Direct Integration with SaaS Technologies**

Including AWS, GitHub, Slack, Google Workspace, Jamf and Rippling which automates evidence collection.

#### **Direct Integration with VGS Vault**

VGS Vault is a secure database that stores aliased sensitive data, which simplifies evidencing.

# Single-Tool Simplifies **Audit Work**

Unlike other platforms, VGS Control stores attestation evidence directly in your account — making it readily accessible by your team and your audit partner. Plus, your entire audit process takes place inside one tool; auditors can comment, accept or reject evidence, in real-time, effectively eliminating any need to mass export files to an auditor or use another GRC tool.

# Integration with SaaS and Cloud Services

VGS Control seamlessly integrates with your entire stack—including integrations with 26+ popular Cloud technologies giving you complete visibility into your compliance status. It automatically and intelligently pulls down attestation evidence and appends it directly to the Security Control it maps to.

# Continuous Monitoring

VGS Control monitors your environments and analyzes your existing security posture—as well as continuously checks for changes in compliance status so you always know where you stand.
