

## Case Study

# STILT

### Client

Stilt is a mission-driven fintech company that provides financial services to immigrants and the underserved. They build products to improve financial inclusion and democratize access to credit.

### Region

United States

### Industries

E-commerce

---

**Goal:** Get a new product to market, fast

**The Challenge:** Set up a secure, compliant, and automated way to process B2B payments, like ACH transactions.

**The Solution:** Secure PCI level 2 compliance quickly to launch a new debit card product that allows users to see their debit card numbers in Stilt's application.

**The Results:** Stilt's business partners were willing to accelerate timelines as soon as they integrated with VGS and achieved PCI Level 2 compliance in just one week. Stilt launched their new product 80% quicker than they could have without VGS.

**Priyank Singh,**  
Founder

*"With VGS, we were able to get running on the platform and become PCI level 2 compliant in less than a week, with very little effort on our part."*
