

AI tools to build apps that are lovable

Tools we use every day to accelerate the software development process and deliver apps that users love.

Product strategy

AI tools for research and discovery

General purpose AI

Product research, competitive benchmarking, and industry analysis.

Product & project management

Organize projects, summarize meetings, write documentation, and accelerate decision-making.

Design

AI tools for designers to create visual assets and build prototypes

Rapid exploration

Rapid prototyping, UI concepting, and experience exploration.

Image generation

Visual asset creation and creative exploration.

Development

AI coding agents and development tools

Design to code

Rapid prototyping, UI concepting, and technical exploration.

Agentic IDEs

Code editors with context awareness.

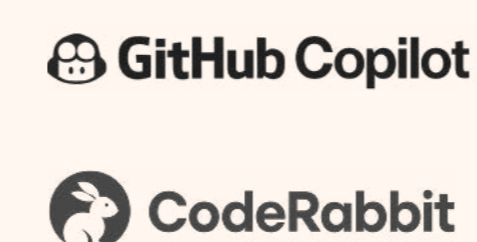

CLI agents

Command-line coding agents with deep reasoning.

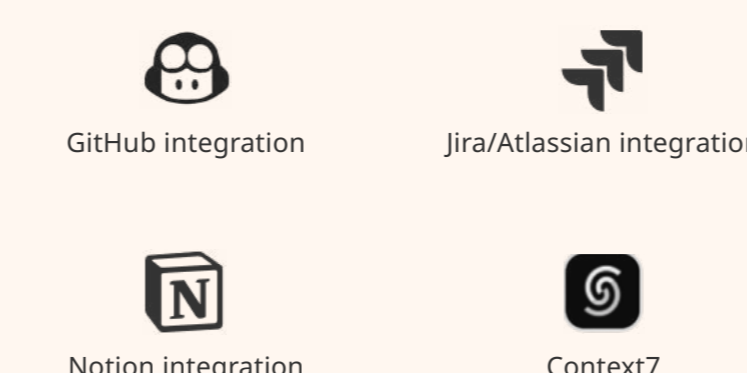

Code review assistants

Code reviews with context awareness.

Workflow integration

MCP servers integrate IDEs with other project tools to streamline workflows.

QA

AI-enhanced testing and quality assurance

Test automation assistants

Generate tests and keep them up to date.

Testing infrastructure integration

MCP servers integrate with leading test platforms (developed by ArcTouch).

Our new book, "Human + AI: The new way to build apps that are lovable", explores how we use these tools every day.
