STRONGCAST PROFESSIONAL RANGE

Case Study.

Contractor praises quality and ease of installation of new product from Ibstock.

The recently launched Supreme Strongcast Professional Range concrete fencing solution from Ibstock has received the 'thumbs-up' from contractors T & B Building Services based in Coventry, West Midlands.

Director Tom Massey commented:

"It's always good to work with quality materials and we found installing the Strongcast Professional Range posts in our customer's garden straightforward and easy. The garden was 110ft long and required 19 posts, plus 17 gravel boards, so the lightweight and portability of the posts really helped us save time in the installation. Not only this, they are robust and durable too – meaning they will really stand the test of time in this garden."

"In fencing applications, it's important to use materials that offer functionality and strength and Strongcast Professional Range offers this in spades. It really is a false economy to use cheap inferior products that will need replacing sooner rather than later."

The Strongcast Professional Range includes slotted concrete fence posts, and concrete recessed gravel boards, including the new hedgehog gravelboard which allows hedgehogs to roam freely.

The new range seeks to be the best in class for its finish, strength, weight and functionality. What's more, the product also delivers less embodied carbon than rival solutions, making it a more sustainable choice for homeowners, too.

"Simply a great product" – is how Tom sums up the Strongcast Professional Range concrete fenceposts. "Fencing is no longer a cheap commodity and you want your fence panels to be safely and permanently secured – the last thing you want is for them to be damaged in the wind. Our customers chose Strongcast Professional posts because they are robust and will withstand any weather conditions for decades to come."

Sean, the property's owner, added:

"I'd definitely recommend Strongcast Professional posts to other homeowners installing a new fence in their garden. They've got a narrow profile with a sleek finish, meaning they're unobtrusive and can work alongside a whole host of garden designs."
