

Fully Automated Identity Verification

Anyone, Anywhere, Anytime

OCR Labs is a simple way to remotely verify your customers' identity in seconds. We can verify the identity of anyone, anywhere, anytime - with just their ID and a smartphone.

We built all of our technology from scratch, and continually update it to stop fraudsters and impersonators before they can access your app. With our unique approach to delivering ID verification - which doesn't rely on a template library or expensive human agents - we are able to help you drastically reduce overhead costs and fraudulent account signups while meeting local regulations without compromising on customer experience.

Like our technology, we're a global company with offices in the UK, Australia, Turkey, and the USA - so we can meet you wherever you are.

16,000+ ID documents

220+ Countries

142 Languages & typesets

Our deep learning technology allows you to securely and quickly verify your customers' information wherever they are, without slowing down onboarding - rapidly improving both fraud and conversion rates simultaneously.

Maximise customer conversion

Verify new users from anywhere, on any smartphone, with our fully automated solution. With no need for agent intervention and a quick, definitive outcome, you'll reduce drop-offs and increase conversion during onboarding.

Grow your community safely

With our biometric verification, you can spot real, live customers and sellers making a genuine attempt to sign up - preventing impersonators from accessing your platform ensuring only verified members are able to have access to your community.

Verify & reauthenticate account owners

Quickly and securely reauthenticate users with biometric liveness, using their originally approved ID document to ensure only your verified community members have the ability to reset passwords. The entire process can be embedded in your platform for improved user experience and deterrence against the distribution of unlawful content.

Deliver trust and safety

Our platform meets the most stringent privacy, security, and integrity standards - as well as covering almost every identity document in the world. Plug in your external data sources to check against the optical information we collect.

Launch into new markets & expand with confidence

Whether you're looking to launch into new markets or expand in existing markets, our platform gives you access to instant global coverage with our 16,000+ recognised documents and 142 languages/typesets with the ability to transliterate back to your CRM language.

Get up and running with OCR Labs quickly using our secure and reliable API or dashboard.
