

Fully Automated Identity Verification

Anyone, Anywhere, Anytime

OCR Labs is a simple way to remotely verify your customers' identity in seconds. We can verify the identity of anyone, anywhere, anytime - with just their ID and a smartphone.

We built all of our technology from scratch, and continually update it to stop fraudsters and impersonators before they can access your platform - protecting you from revenue and reputational loss while ensuring you meet your regulatory obligations.

Like our technology, we're a global company with offices in the UK, Australia, Turkey, and the USA - so we can meet you wherever you are.

16,000+ ID documents
220+ Countries
142 Languages & typesets

Our deep learning technology allows you to securely and quickly process your customers' information with minimal friction to your existing onboarding process.

Improving both fraud and conversion rates simultaneously.

Trusted by:

Document Verification

Verify a customer's identity document and safely onboard them from anywhere in the world. Our technology sees and interprets documents, rather than relying on templates.

Biometric Verification

Verify it's a live person presenting an identity document and that it's their face in the document image. We use advanced image analysis and liveness checks to spot real, live customers making a genuine attempt to sign up.

Data Verification

Extract and verify information from an identity document against local government & credit bureau databases - all in real-time. Meet your compliance obligations with a simple API integration.

Reauthentication

Step up authentication keeps your customers' accounts secure and makes account recovery a breeze by matching their face to their original ID, which they provided during onboarding.

Video KYC

Meet your local regulatory requirements with a video call. Onboard users with live video authentication that connects to your own or an outsourced client support centre.

Get up and running with OCR Labs quickly using our secure and reliable API or dashboard. Visit ocrlabs.com to learn more or email hello@ocrlabs.com to speak with us.
