

# Spy Kids: Armageddon LED Spy Sneakers

1

### Gather supplies

- Pair of shoes (black high top sneaker)
- 2 LED light strips with battery box
- Batteries
- Hot glue
- Scissors
- Black felt

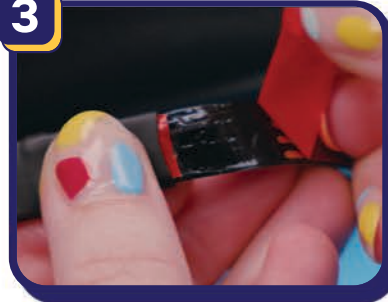

2

### Get started

Place the battery pack inside the shoe. Feed the wire over the inner side of the shoe. Connect the light to the controller.

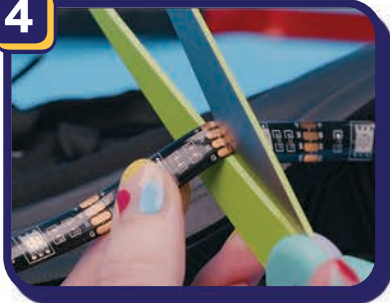

3

### Measure

To measure the length of light strip needed, unroll the LED strip and place it all the way around the rubber base of the shoe.

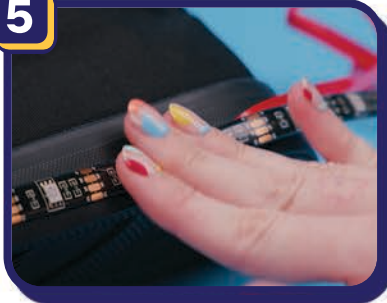

4

### Cut

Cut the LED strip to the right size. (Cut on orange section to avoid lights.)

5

### Adhere

Peel off the backing paper of the LED light in small sections. Press each section of the light to the shoe for a few seconds to ensure a good bond.

6

### Batteries

Make a pouch for the battery pack by cutting the black felt to form a rectangle twice as wide as the battery pack. Leave room on the sides.

7

### Glue

Fold the felt in half and hot glue along the edge and bottom to make a little pouch.

8

### Secure

Hot glue the pouch to the inside tongue of the shoe and place the battery pack inside. Repeat process for second shoe.
