

PhD PROGRAM IN VETERINARY AND ANIMAL SCIENCES

Where (not) to publish my results? The case of predatory Journals

Dr Paola Galimberti

Direzione Performance, Assicurazione Qualità, Valutazione e Politiche di Open Science

UNIVERSITA' DEGLI STUDI DI MILANO

Predatory publishing takes unfair and opportunistic advantage of the emphasis placed by institutions and research funding bodies on openness. Publishing with a predatory publisher can have unpleasant consequences for a young researcher. The seminar aims to give a definition of predatory publishing and provide the tools to identify it. We will learn to recognize a predatory publisher and also predatory traits using examples drawn from a clearly predatory publisher and from a questionable publisher.

Friday May 20th, hr 14:30 room L05
