

## Painted Leather Key Chain

Make your keys unique and easier to find! Create a one-of-a-kind keychain in a snap with leather scraps and leather dye pens.

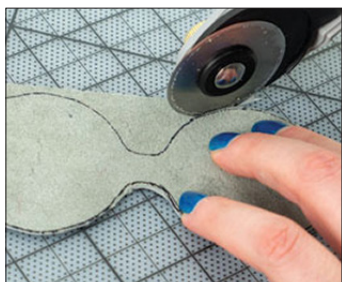

### HOW TO MAKE IT

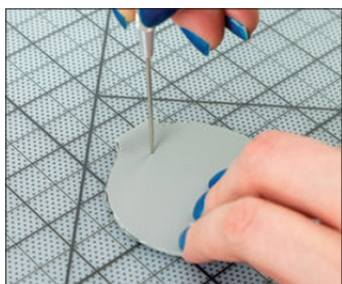

#### STEP 1

Print and cut out the circular template. Pick your desired leather scrap and trace the design on the back of your piece of leather.

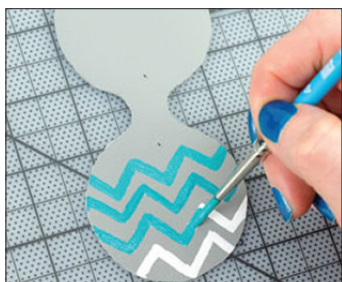

#### STEP 2

Cut out the design using the Leather Rotary Cutter.

#### STEP 3

Choose a location for the rivet just below where the keychain loop will be. Use an awl to poke a hole at your rivet location through both pieces of the folded leather.

#### STEP 4

Use the Realeather Leather Dye Pens to apply your design. To add a light color on darker leather surfaces, apply a white base coat prior to adding the lighter color.

## Painted Leather Key Chain (HOW TO MAKE IT continued)

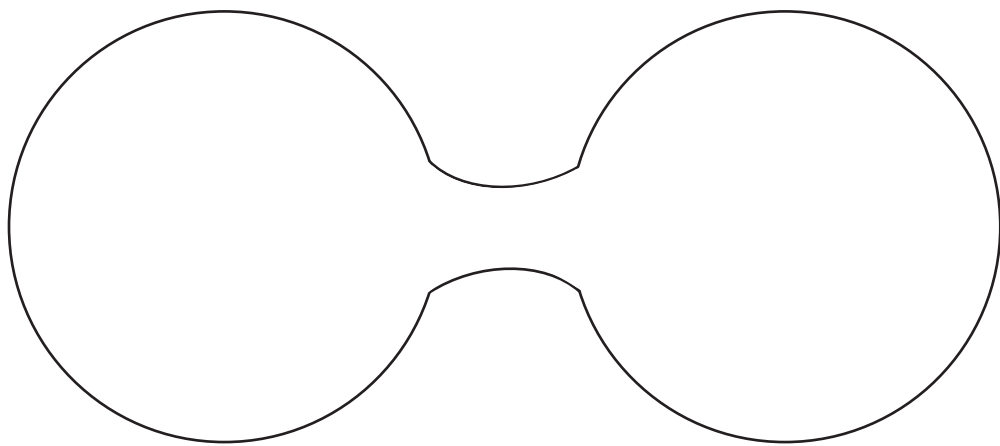

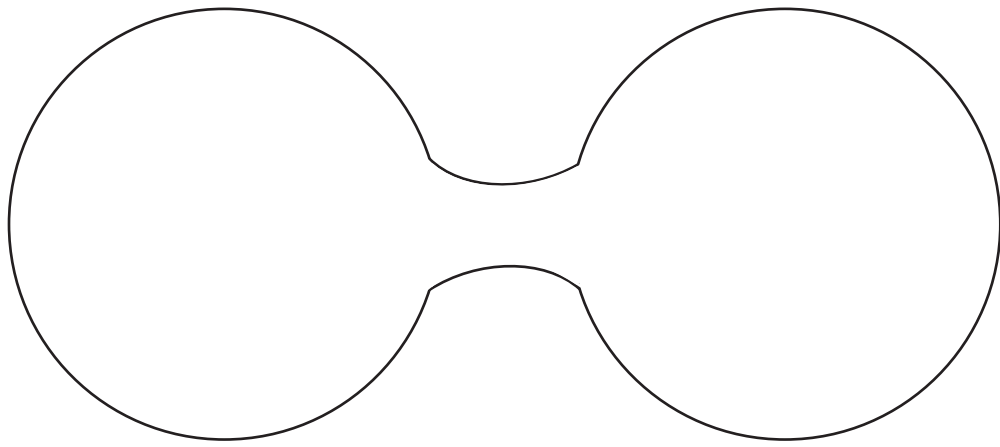

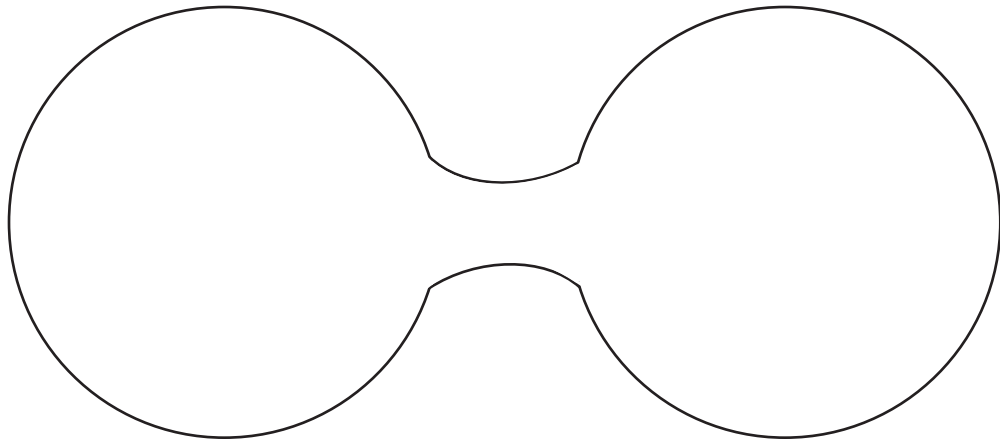

### STEP 5

Once the leather paint is dry, set the rivet. Place the anvil on a flat surface and put the rivet post on the anvil. Place the painted leather on top of the rivet, threading the rivet through the hole.

### STEP 6

To finish the keychain, use the setter and mallet to secure the rivet. Now you're ready to add it to your key ring!
