

MONTANA PRIMER 400ML – UNIVERSAL

The Montana UNIVERSAL PRIMER is the perfect tool for the job when you want to create a neutral surface of which to apply further coatings onto. As an all rounder of the Montana PRIMER range, the UNIVERSAL PRIMER is the primer for those who just want one primer for varied surfaces. The Montana UNIVERSAL PRIMER is ideal for sealing and preparing surfaces for the efficient application of further color coats. The UNIVERSAL PRIMER assists in adhesion, maximizes coverage of further coatings, seals porous surfaces and protects from the elements.

PRODUCT INFORMATION "MONTANA PRIMER 400ML – UNIVERSAL"

The Montana UNIVERSAL PRIMER is the perfect tool for the job when you want to create a neutral surface of which to apply further coatings onto. As an all rounder of the Montana PRIMER range, the UNIVERSAL PRIMER is the primer for those who just want one primer for varied surfaces. The Montana UNIVERSAL PRIMER is ideal for sealing and preparing surfaces for the efficient application of further color coats. The UNIVERSAL PRIMER assists in adhesion, maximizes coverage of further coatings, seals porous surfaces and protects from the elements. It offers resistance against rust, a smooth surface to work on and generally prepare and protect a substrate for further coating. The Montana UNIVERSAL also increases the durability of surfaces once coated. We suggest trialing on a non-visible area of your material to test for compatibility. You can apply any Montana-Cans color, TECH or EFFECT spray over the UNIVERSAL PRIMER once it has dried and cured. Montana UNIVERSAL PRIMER will increase the intensity and longevity of the coatings applied over it. Curing time is 24 or more hours depending on ambient temperature and moisture levels. The Montana UNIVERSAL PRIMER is a white colored, semi gloss coating, in a Nitro-Combi based composition which achieves a neutral color base for the application of any of the Montana GOLD, Montana BLACK or Montana WHITE color range. Montana UNIVERSAL PRIMER can be applied to wood, metal, firm paper, cardboard, concrete, ceramic and other materials. Smooth, even application is effortless thanks to the Montana FLAT JET Medium cap which is standard on the can. To vary the spray application, why not try the Montana FLAT JET WIDE, the FAT CAP GOLD/BLACK or any of the Montana LEVEL 1-3 caps. Ensure all surfaces are completely clean and free of dust, oils and rust. In cases where rust is present, ensure all rust is removed before application.

USE: Apply primer in several thin layers spraying before the previous coat is fully dry, but with 1 or 2 minutes between each pass. Further coats might require a drying time of 24 hours or more depending on substrate. Always test spray on a non-visible area to check compatibility of lacquer or paint. For optimal lifespan, store cans always with the nozzle on.
