

Affenzahn

LANTERN

What you need:

Scissors, glue, wire or rope, lantern stick with light, colored tissue paper or crêpe paper, possibly some cardboard

1. Print the three A4 pages in color, best on firm paper (300 gsm). If you only have normal printer paper at home, simply glue the pages after printing on firmer cardboard and then cut out your Affenzahn.
2. In the next step, cut out all the shapes that are marked with the small scissors along the dashed lines.
3. Glue the silk / crêpe paper behind all the open spaces of both the elements that you have already cut out so well in step 2.
4. Take the strip of paper with the little flaps. Glue the flaps to one of the Affenzahn cutouts, starting at the short side (the feet).
5. Now glue the second Affenzahn cutout to the remaining flaps of the strip of paper. Make sure that the upper part, where the head is, stays open.
6. Almost done! Now you just have to light up your lantern. To do this, first put a rope or a wire through the side section, which are marked. Now you can hang your lantern on your lantern stick and you're ready to go!

**We wish you a lot of fun with your
self-made Affenzahn lantern!**
