

Frame Agreement with Hydro Havrand

Hydro Havrand has awarded REINERTSEN New Energy a Frame Agreement for engineering services within all relevant fields of engineering in project development and execution phases.

The Frame Agreement is valid for 9 years (incl options) and the objective is to regulate a long-term business relationship.

The Work will typically be studies and engineering activities related to the following facilities and issues:

- Site and layout for industrial developments
- Energy production facilities
- Energy storage and batteries
- Hydrogen plants
- Mechanical and process equipment
- Environmental and social issues related to industrial project developments
- Health, safety, and risk assessment related to construction and operation of facilities

The core of Hydro Havrand's business is using green hydrogen based on renewable energy to replace fossil fuels across a range of sectors. This includes many heavy industries where a part of the production process often requires temperatures far higher than what electricity can produce, as well as the maritime sector and long-distance transport. Together these three sectors make up almost 30% of global CO2 emissions and we can change that by getting them to switch to green hydrogen.

REINERTSEN New Energy has worked with hydrogen production and related technology since 2011 and provides engineering solutions to the hydrogen value chain. In the role of owner's engineer / technical advisor, REINERTSEN New Energy pledge to be the Client's trusted advisor and independent consultant in all phases of his projects.

**HYDROGEN AT SCALE,
EMISSIONS AT ZERO**

REINERTSEN New Energy supplies engineering solutions to the hydrogen value chain. Serving as the independent engineer to global gas pioneers, we embark on a new and clean industrial adventure - for those that come after us and the world they will live in.
