Protect Calves and Profits
With Scour Bos®.
**What is scours?**

Scours, or calf diarrhea, is a common result of bacterial and viral infections in the lining of calves’ intestines.

- Calves are especially vulnerable because they face many stressors in the first few hours of life, and their young immune systems have not yet fully developed.
- Calves depend on getting adequate colostral immunoglobulins to provide protection from enteric pathogens.
- Infected calves can quickly infect other newborn calves in close proximity.
- Calves that suffer from scours are less likely to catch up and reach full potential, if they survive at all.
- Vaccinating against scours can lead to healthier, more resilient calves.

**Why choose Scour Bos®?**

**16-WEEK INITIAL VACCINATION WINDOW**

Scour Bos can be administered up to 16 weeks pre-calving, providing the longest vaccination window of any scours vaccine.

- Flexible, convenient administration at preg-check saves time.
- More time for heifers and cows to build up antibody-rich colostrum that fosters protection against scours-causing pathogens.

**9 ANTIGENS**

Scour Bos 9 provides nine antigens for broad-spectrum protection against:

- Coronavirus
- Clostridium perfringens Type C
- Four isolates of K99 Escherichia coli
- Three rotaviruses: G10, G8 and G6

**3-WAY ROTAVIRUS**

Scour Bos is the only three-way rota on the market.

**4 E. COLI ISOLATES**

Scour Bos 9 includes more E. coli isolates than any other scours vaccine.

**XTEND® ADJUVANT**

Maintains higher and longer-lasting immune stimulation.

**Timing is everything.**

**FOR PROTECTION BEYOND PREG-CHECK AND DRY-OFF, YOU NEED SCOUR BOS**

- Scour Bos’ formulation provides a smooth, safe vaccine.
- Allows more time for heifers to build up colostrum and maximize colostral antibodies.
- Economical choice.
- Available in 10- and 50-dose vials.

**COMPARE ANNUAL REVACCINATION TIMING**

**SCOURGUARD® 4KC**

**GUARDIAN®**

**SCOUR BOS ADMINISTRATION SCHEDULE**

*Based on extended days of immunity, as per label.

**97% OF VETERINARIANS WHO USED SCOUR BOS SAID IT MET OR EXCEEDED EXPECTATIONS, DESPITE SEVERE WEATHER.**

*1* Scours, or calf diarrhea, is a common result of bacterial and viral infections in the lining of calves’ intestines.

*2* Year 3: Initial vaccination with Scour Bos 9

*3* Year 1, booster with Scour Bos 4 only

*4* Annual revaccination with Scour Bos 9
Scours protection like no other.
