Simcro™ Sekurus™ Syringe — Enhance User Safety

Developed and manufactured by Simcro, the syringe has patented technology with self-tenting and needle-guard features.

- The syringe reduces the chance of accidental self-injection and withstands the most challenging environments at feedyards and stocker operations
- To be activated, the trigger must be pulled and then the syringe pushed against the calf. Both actions must be performed for the product to be administered
- To obtain more information about this syringe, or to receive one, please contact your veterinarian, distributor or Elanco representative

Syringe handling and use recommendations

- If administration syringe is damaged in any way, discontinue use immediately and replace it
- Exercise caution and care when removing needle from administration syringe so as to not pierce skin with needle
- Keep protective cover on needle until ready to use
- Never carry loaded syringes in pocket or clothing

Micotil® (tilmicosin injection) is indicated for the treatment of bovine respiratory disease (BRD) associated with *Mannheimia haemolytica*, *Pasteurella multocida* and *Histophilus somni*, and for the control of respiratory disease in cattle at high risk of developing BRD associated with *Mannheimia haemolytica*.

Important Safety Information

Before using this product, it is important to read the entire product insert, including the boxed human warning. Caution: Federal (USA) law restricts this drug to use by or on the order of a licensed veterinarian. Not for human use. Injection of this drug in humans has been associated with fatalities. Keep out of reach of children. Do not use in automatically powered syringes. Exercise extreme caution to avoid accidental self-injection. In case of human injection, consult a physician immediately and apply ice or cold pack to injection site while avoiding direct contact with the skin. Avoid contact with eyes. Always use proper drug handling procedures to avoid accidental self-injection. Consult your veterinarian on the safe handling and use of all injectable products prior to administration. For use in cattle or sheep only. Inject subcutaneously. Injection of this antibiotic has been shown to be fatal in swine and non-human primates, and may be fatal in horses and goats. Do not use in lambs less than 15 kg body weight. Do not use in female dairy cattle 20 months of age or older. Use in lactating dairy cattle or sheep may cause milk residues. The following adverse reactions have been reported: in cattle: injection site swelling and inflammation, lameness, collapse, anaphylaxis/anaphylactoid reactions, decreased food and water consumption, and death; in sheep: dyspnea and death. Micotil has a pre-slaughter withdrawal time of 42 days.
Proper Micotil (tilmicosin injection) handling procedures

- Storage of Micotil in a secure location to prevent the risk of misuse by humans is recommended
- Recommended storage includes a lockable cabinet or container or a secure storage room, depending on the amount of product in inventory
- Keep full or empty Micotil bottles, used syringes and needles out of the reach of children
- Access to Micotil should be limited to personnel trained in safe handling and use procedures
- Read, understand and follow all label use directions
- For subcutaneous use only; do not use in automatically powered syringes
- Wash hands thoroughly with soap and water after handling
- Ensure proper disposal of needles, syringes and bottles

If accidental exposure occurs seek immediate medical attention:

REACH for and apply an ice pack

REFERENCE the product label “Note To The Physician” and/or product insert and provide to emergency medical personnel
