

Vortexa Appoints Richard Quin as Chief Strategy Officer

London, 2 September 2026 — Vortexa, a leading decision intelligence platform for global energy and freight markets, today announced that Richard Quin has joined the company as Chief Strategy Officer. In the newly created executive role, Quin will lead company strategy, data partnerships and market analysis, alongside major cross-company growth initiatives.

Quin brings more than two decades of experience across energy, data and analytics. Before founding Hahei Consulting in 2023, he served as Chief Strategy Officer and subsequently Chief Operating Officer at Kpler. Earlier in his career, he held senior strategy, corporate development and commercial roles at Verisk Analytics and Wood Mackenzie.

“Richard brings a rare combination of industry depth, strategic judgement and operating experience,” said Fabio Kuhn, Founder and CEO of Vortexa. “He understands both the energy information landscape and what it takes to scale a global data business. I am extremely excited to have him join us.”

“Having spent more than two decades in energy market intelligence, I know what genuine differentiation looks like - and how rare it is. Vortexa has built a truly exceptional real-time view of global energy and freight markets that is invaluable to clients. What drew me here is the opportunity to compound that advantage” said Richard Quin, Chief Strategy Officer at Vortexa.

Quin’s appointment comes as Vortexa enters its next phase of growth, following the launch of [Anywhere Freight Pricing](#) and ahead of further AI-driven innovations to be unveiled during its upcoming Innovation Series roadshow. The creation of the Chief Strategy Officer role reflects both the scale of Vortexa’s ambitions and its commitment to combining product leadership, differentiated data and deep market expertise to help clients make faster, higher-confidence decisions across global energy and freight markets.

About Vortexa

Vortexa is the decision intelligence layer for the physical energy market, built from the bottom-up — cargo by cargo, vessel by vessel — so every number traces back to source. By connecting freight, inventories and flows, and backed by energy specialists, Vortexa tracks over \$3.4 trillion in waterborne energy trades a year, giving traders, analysts, charterers and shipping professionals the clarity to act with confidence. Headquartered in London, with offices in Geneva, Dubai, Singapore, Houston and New York.
