

## Medesync EMR

Helping you deliver specialized podiatry care to your patients.

Not all EMRs are created equal. Designed by a physician, Medesync is a web-based EMR that's bilingual, reliable and easy to use, with built-in tools to support your podiatry practice.

### **Efficiently manage prescriptions.**

Quickly search for drugs and add favourites, create templates to prescribe various medications with a single click, create prescription models that comply with podiatry regulations, and use convenient features like display of required clinical data (e.g. weight) to adjust patient dosage on the fly.

### **Monitor patient progress at a glance.**

Monitor patient progress from orthotic devices using extracted data from dynamic PDFs or personalized forms. Use the graphical representations to help make informed decisions rapidly.

### **Easily adapt patient care.**

Capture notes using a stylus, keyboard, shortcuts or voice dictation. Using the stylus, you can add notes to images uploaded from your mobile device. Use built-in, customizable podiatric templates and forms, or create your own. Forms can be auto-populated with demographic and clinical data. Create consult letters, progress notes and send/receive referrals via secure email or efax.

### **Understand your patient population.**

Leverage advanced search analytics to define patient groups, track clinical characteristics and monitor patients with identified special conditions, such as plantar fasciitis.

### **EMR access on the go.**

Remotely connect to your EMR from a mobile device with the free [TELUS EMR Mobile](#) app. Access patient and clinic information, manage labs, document symptoms and more.

## Bring your EMR to the next level.

Increase your clinic efficiency, integrate powerful EMR add-on tools and engage your patients with Medesync.

### Customize your EMR

Easily customize your patient summary and clinical notes, and create your own electronic forms.

### Manage lab results easily

Examine lab and test information for a specified time period and pull lab results directly into a patient's chart for a single view.

### Connect with patients

Use the patient portal to send individual and group messages privately. Allow for online pre-visit questionnaires and appointment booking.

### Provider-to-provider communications

Exchange and store unlimited digital and eFax communications with other healthcare professionals with MedDialog.

### Virtual visits

Treat your patients remotely, access health information and update patient health records simultaneously with TELUS EMR Virtual Visit.

### Electronic prescription renewals

Process prescription renewal requests from pharmacists directly from your EMR, and automatically update information in both your EMR and the DSQ.

**Taking care of your patients is your priority. Supporting you is ours.  
By working together, we can improve care delivery across the health continuum.**

Turning information into better health outcomes for Canadians.
