

CONSTRUCTION CHARGES

Item  
98 PUBLIC PROPERTY

Item 98 is grandfathered and not available for new service orders effective 2010 02 15. For new service orders, Item 98 Construction Charges - Public Property has been replaced by CRTC 21461, Item 406.

A. GENERAL

Circuits, ducts, equipment and poles on public property will be owned by the Company, or by some other company with whom the Company has joint ownership or a contract agreement.

B. RATES

When new construction is required to furnish service to principal premises beyond existing exchange facilities or Exchange Area Radiotelephone Service (EARS) coverage areas, the Company will assess construction charges, based on the costs incurred, as follows:

Charges Per Principal Premises

First \$2 000.00 of costs incurred	-
Next \$9 000.00 of costs incurred	20% to a maximum of \$1 000
Balance of costs incurred	100%

When two or more principal premises are to be served by new construction, the allowances for each premises will be combined. The amounts of any construction charges will be determined by dividing the total costs equally among the number of principal premises to be served and applying the above formula. Additional principal premises utilizing the new facilities within a three-year period may be assessed construction charges based on the total amount of construction charges assessed the original customers. Construction charges paid for provision of service to additional principal premises will be rebated to the original customers.
